## **1.0 INTRODUCTION**

### **1.1 Background Information**

The A-level Chemistry syllabus for Tanzania was last reviewed in 1996. It has taken twelve years for the next review done in 2008.

The 2008 review has been done in the context of serious global and local changes and challenges such as ICT developments and cross-cutting issues. The present review has been done according to the requirements of the contemporary curriculum paradigm shift, where the student is placed at the centre of the teaching-learning process. Student learning is supposed to be activity oriented and cooperative in nature.

The present A-level Chemistry curriculum review is based on the country-wide monitoring research which was done in 2007 on the implementation of the A-level curriculum. This review study was followed by a meeting of A-level stake holders, who contributed important ideas and recommendations which has guided the review process. Their comments have been taken on board.

The world in the last ten years has changed very much technologically and socially. The present review has put enough emphasis on the development in the learners skills and competences needed in every day life. This syllabus has treated quite well the Environmental and Soil Chemistry.

### **1.2 Brief Description of the Subject**

Chemistry is studied as a principal subject. The content has been carefully selected and organised so as to promote interest and motivation throughout the course. The topics fall under 5 (five) blocks, namely General Chemistry, Physical Chemistry, Inorganic Chemistry, Environmental Chemistry and Organic Chemistry.

### **1.3 Rationale for Review of the Chemistry Subject Syllabus**

The monitoring research which was done in 2007 to pave the way for the syllabus review identified the following gaps in the chemistry syllabus of 1996:

- The syllabus was knowledge - based and not learner - centred;
- It was not geared towards constructivism;
- It was missing important content areas such as soil chemistry, cross - cutting

issues, environmental and soil chemistry, as well as qualitative analysis. In designing this syllabus, due consideration has been made for it to be learner centred, activity oriented and the cross-cutting issues have been integrated.

The sub-topics removed were Cyclic hydrocarbons and Amides. However, radioactivity was shifted to Physics. Extraction of metals, Environmental Chemistry, Soil Chemistry and Qualitative Analysis have been added. More over, teaching/learning strategies, assessment and number of periods per sub-topic have been included in the syllabus.

## **2.0 OBJECTIVE OF EDUCATION IN TANZANIA**

The general aims of education in Tanzania are to:

- a) guide and promote the development and improvement of the personalities of the citizens of Tanzania, their human resources and effective utilization of their resources in bringing about individual and national development;
- b) promote the acquisition and appreciation of culture, customs and traditions of the people of Tanzania;
- c) promote the acquisition and appropriate use of literary, social, scientific, vocational, technological, professional and other forms of knowledge, skills and understanding for the development and improvement of man and society;
- d) develop and promote self-confidence and an inquiry mind, an understanding and respect for human dignity and human rights and a readiness to work hard for personal self advancement and national improvement;
- e) enable and expand the scope of acquisition, improvement and upgrading of mental, practical productive and other life skills needed to meet the changing needs of industry and the economy;
- f) enable every citizen to understand the fundamentals of the national constitution as well as the enshrined human and civic rights, obligation and responsibilities;
- g) promote the love for work, self and wage employment and to improve performance in the production and service sectors;
- h) inculcate principles of national ethics and integrity, national and

international cooperation, peace and justice through the study, understanding and adherence to the provision of the National Constitution and International basic charters and

- i) enable a rational use, management and conservation of our environment.

### **3.0 AIMS AND OBJECTIVES OF SECONDARY EDUCATION**

The general aims and objectives of education in Tanzania are to:

- a) consolidate and broaden the scope of baseline ideas, knowledge, skills and principles acquired and developed at primary education levels;
- b) enhance further development and appreciation of national unity, identity and ethnic personal integrity, respect for and readiness to work, human rights, cultural and moral values, customs, traditions and civic responsibilities and obligations;
- c) promote the development of competency in linguistic ability and effective use of communication skills in Kiswahili and at least one foreign languages;
- d) promote opportunities for the acquisition of knowledge, skills, attitudes and understanding in prescribed or selected fields of study;
- e) prepare students to tertiary and higher education; vocational, technical and professional training;
- f) inculcate a sense and ability for self-study, self-reliance and self-advancement in new frontiers of science and technology, academic and occupational knowledge and skills and
- g) prepare the student to join the world of work.

### **4.0 GENERAL COMPETENCES FOR THE SUBJECT**

A-level students who study Chemistry as a principal subject should strive to develop the ability to:

- a) communicate well using chemical symbols, formulae and equations as well as the language of instruction;
- b) use mathematical principles to understand the processes of qualitative and quantitative chemical reactions;
- c) use knowledge and skills to solve social and environmental problems related to Chemistry;

- d) learn Chemistry knowledge and skills from a variety of sources;
- e) use knowledge and skills of Chemistry to address the problems of drug and substance abuse, as well as environmental destruction and
- f) use principles of science and technology in the teaching and learning of Chemistry, and in solving Chemistry problems in the society.

## **5.0 GENERAL OBJECTIVE FOR THE SUBJECT**

By the end of the A–Level Chemistry course, the learners should be able to;

- a) use language and symbols to communicate chemical information;
- b) apply mathematical skills to analyse and interpret chemical phenomena;
- c) apply knowledge and skills of Chemistry for proper environment conservation;
- d) cultivate an understanding and appreciation of the role and importance of Chemistry in everyday life;
- e) explain how to combat the social predicament of substance abuse;
- f) develop fundamental concepts, principles and skills in Chemistry to solve problems in the society and
- g) to prepare themselves for further studies in Chemistry and related fields.

## **6.0 ORGANIZATION OF THE SYLLABUS**

This syllabus has a slightly different structure and organization compared to the 1997 syllabus. The current syllabus has six (6) columns, namely topic/ subtopic, specific objectives, teaching and learning strategies, teaching and learning resources assessment and number of periods.

In addition the following changes were incorporated for improvement:

- a) General competences for the whole course.
- b) Competences for forms V and VI.
- c) Suggested areas of assessment.
- d) Number of periods per sub-topic.
- e) Assessment for the subject.

### **6.1 Class Level Competences**

Competences are the skills, knowledge and attitudes attained by the learners after a learning process. Competences have been stated for each of the class levels of the Chemistry course, i.e. Form V and VI. It is upon the class level

competences that the class level objectives were developed.

## **6.2 Class Level Objectives**

The general objectives for form V and for form VI have been stated so as to indicate the scope of coverage within each level.

## **6.3 The Content Matrics**

The Content Matrics for this syllabus has the following columns:

- Topic/sub-topic
- Specific instructional objectives
- Teaching/Learning Strategies
- Teaching/Learning Resources
- Assessment
- Number of Periods

### **6.3.1 Topic/sub-topics**

#### **Topics**

The topics in this syllabus have been derived from the class level competences and objectives. Most of the topics in the 1996 A-level Chemistry syllabus have been retained. Some sub-topics have been left out in order to cut the syllabus short. However, some topics of major interest have been introduced, these include:

- Soil Chemistry
- Environmental Chemistry (CCI)
- Analytical Chemistry

#### **Sub-topics**

Topics have been divided into sub-topics. Each sub-topic comprises of a portion of the content of the topic in question. The sub-topics have also been arranged to attain a logical order which facilitates transfer of learning.

### **6.3.2 Specific objectives**

There are specific objectives for each sub-topic. These are the expected outcomes of classroom instruction. They also reflect the process involved to attain the competences expected. The objectives are meant to cover the whole range of learning domains; i.e cognitive, psychomotor and affective.

### **6.3.3 Teaching/learning strategies**

The column of Teaching/Learning Strategies suggest that in the Teaching/Learning process, both the teacher and the students must be involved in activities. Students are encouraged to work in small groups for maximum participatory and co-operative learning. The teacher is supposed to help and facilitate students' learning activities. The whole syllabus encourages interactive and participatory Teaching/Learning. However, the Teaching/Learning strategies suggested in this syllabus are not exhaustive. The teacher and students may decide to use any other Teaching/Learning strategies which suit the Teaching/Learning environment and the available Teaching/Learning resources to teach a particular topic.

### **6.3.4 Teaching/learning resources**

In the teaching of A-level Chemistry a variety of Teaching/Learning resources of different nature, quality and quantity will be needed. Incase the commercial Teaching/Learning resources are not available in their environment, the teacher together with students are expected to collect or improvise alternative resources available in their environment.

### **6.3.5 Assessment**

For every specific instructional objective, there is a suggested question or area for assessment. Formative and summative assessment should be geared towards mastering all the competences and skills developed within the course. Teachers should use assessment tools to assess student's ability by the end of the lesson. Examples of these tools are: Tests, quizzes, assignments, exercises, project work, experimental work and portifolios.

### **6.3.6 Number of periods**

Each sub-topic has been allocated a specific number of instructional periods. The teacher should ensure that the sub-topic is completed within the specified time. The longer and more difficult topics involving more practical sessions have been allocated more instructional periods.

## **7.0 INSTRUCTIONAL TIME**

The A-level Chemistry syllabus is meant to be covered in two years. The subject matter content has been apportioned to Form V and Form VI.

The topics in form V are meant to be a pre-requisite for those taught in Form VI.

According to the Education Circular No. 9 of 2004, there are a total of 194 effective teaching days per year. The syllabus should be covered within those days. Two weeks have been reserved for mid-year and annual examinations in each year. Any lost instructional time must always be compensated for.

## **8.0 ASSESSMENT FOR THE SUBJECT**

The table in page ix shows the type of assessment, assessment measure and weight in percentage (%) to be covered at the end of the course. Teachers are strongly advised to apply wide selection of assessment measures in order to develop students' ability from mastering the subject matter during the instructional process continuous assessment carry 50% and final examination conducted by the National Examination Council of Tanzania (NECTA) will carry 50%.

Type of Assessment	Assessment measures	Frequency			Weight %	Total %	
		Term 1	Term 2	Term 1	Term 2		
Continuous Assessment	1. Practical test	5	5	5		10	
	2. Tests	2	2	2		10	
	3. Individual assignment	1	1	1		5	
	4. Research Project				1	5	
	5. Field Work		1			5	
	6. Terminal Examination	1	1	1	1	15	50
Final Exam	National Examination				1	50	50
						100

**Table for the Distribution of Topic for Form V and VI**

<b>Branches</b>	<b>Topics</b>	
	<b>Form V</b>	<b>Form VI</b>
General Chemistry	1. The Atomic 2. Chemical Bonding	
Physical Chemistry	1. Gases 2. Relative molecular masses in solution 3. Two components liquid system 4. Energetics	1. Chemical equilibrium 2. Chemical Kinetics 3. Electrochemistry 4. Acids, Bases and Salts 5. Solubility, solubility production and ionic production
Inorganic Chemistry	1. Periodic classification 2. Selected compounds of metals	1. Extraction of metals 2. Transition elements
Organic Chemistry	1. Aliphatic hydrocarbons 2. Aromatic hydrocarbons 3. Halogen derivatives of hydrocarbon 4. Hydroxyl compounds 5. Carbonyl compound 6. Carboxylic acids and derivatives	1. Amines 2. Polymers
<b>Topics Added</b>		1. Environmental Chemistry 2. Soil Chemistry 3. Chemical Analysis

## FORM V

### General Competences

By the end of the Form V Chemistry course, students should have the ability to:

1. communicate properly in Chemistry using symbols, formula and equations;
2. use general periodic trends to predict the physical and chemical properties of substances;
3. use various glass ware and a wide range of instruments to carry out chemical analysis;
4. apply chemical methods and design possible approaches to solve environmental problems.

### General Objectives

By the end of the Form V Chemistry course, students should be able to:

- a) communicate well in Chemistry using symbols, formulae and equations;
- b) carry out scientific measurements accurately to at least two decimal places;
- c) perform quantitative and qualitative analysis experiments and analyse their results;
- d) use Chemistry knowledge, principles and skills to solve daily problems;
- e) analyse the chemical and physical nature and properties of matter.

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
<b>1.0 THE ATOM</b>  1.1 Dalton's Atomic Theory	By the end of this sub-topic the student should be able to: a) explain the Dalton's Atomic Theory;	i) Students to discuss main points of the Dalton's Atomic Theory. ii) Students to perform experiments to practice subdividing a solid into fine powder and dilute a coloured solution to colourless.	• Wall chart showing main points of Dalton's Atomic Theory • Copper (II) Sulphate • Chalk • KMnO <sub>4</sub> • I <sub>2</sub> crystals	Is the student able to explain the Dalton's Atomic Theory?  6	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	e) explain the Amendments of Dalton's Atomic Theory.	Teacher to guide students to discuss the Amendments of Dalton's Atomic Theory as a result of the discovery of isotopes.	Wall charts showing amendments of Dalton's Atomic Theory.	Is the student able to explain the Amendments of Dalton's Atomic Theory?	
1.2 Bohr's Atomic Theory	By the end of this sub-topic the student should be able to: a) describe energy levels and the hydrogen spectrum;	Students to discuss how the hydrogen Spectrum is developed from the electron transition between energy levels. Spectral lines forming the Lyman, Balmer, Paschen and Pfund series should be discussed. Teacher to relate the spectrum of elements to their identification.	<ul style="list-style-type: none"> <li>Charts showing diagrams of atomic spectrum</li> <li>Charts showing energy level</li> </ul>	Is the student able to describe energy levels and the hydrogen spectrum?	8
	b) explain the Atomic Theory according to Bohr; c) work out the characteristics of atomic spectrum (energy, frequency, and wave length).	Teacher to guide students to discuss the Atomic Theory according to Bohr. Teacher to lead discussions on the energy, frequency and wave length of the radiations given when electron fall from $n = 4$ to $n = 2$ , and from $n = 4$ to $n = 1$ .	Wall chart showing the stationary states and movement of electrons. Wall chart showing the energy levels of hydrogen atom from Bohr model.	Is the student able to Explain the Atomic Theory according to Bohr? Is the student able to work out the characteristics of atomic spectrum?	3

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
1.3 The Atomic Mass	By the end of this sub-topic the student should be able to: a) explain the sub- atomic particles;  b) compare mass number with atomic number;	Students to discuss impairs the characteristics of each individual sub-atomic particles, namely electron, proton and neutron.	Wall chart showing mass spectrometer.	Is the student able to explain the sub-atomic particles?	2
1.4 The Quantum Theory	By the end of this sub-topic the student should be able to: a) describe the wave- particle duality of the electron;  b) explain the quantum numbers $n$ , $l$ , $m_l$ and $m_s$ ;	Students to compare mass number with the atomic number of atoms.  c) describe mass spectroscopy.	Wall chart showing mass spectrometer	Is the student able to compare mass number with atomic number?  Is the student able to describe mass spectroscopy?	6  Is the student able to describe the wave- particle duality of the electron?  • Charts showing quantum numbers • Pictures showing quantum numbers

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) describe atomic orbitals s, p, d and f;	Students to draw the shapes of the s, p, and d atomic orbitals.	Wall chart showing different shapes of orbitals	Is the student able to describe atomic orbitals s,p, dandf.	
	d) explain Hund's rule, Aufbau's principle and Pauli's exclusion Principle.	i) Teacher to guide students to discuss the implications of the Hund's rule, Aufbau principle and Pauli's Exclusion principle.  ii) Students to write the electronic configurations of elements using the s, p, d and f orbitals.	Wall charts showing how electrons are filled in different energy levels.	Is the student able to explain Hund's rule, Aufbau's principle and Pauli's Exclusion principle?	
<b>2.0 CHEMICAL BONDING</b>  2.1 Types of Bonds	By the end of this sub-topic the student should be able to:  a) differentiate the characteristics of electrovalent and covalent bonding;  b) describe dative bonding;	Students to brain storm the differences in the characteristics of the covalent and electrovalent bonds.	<ul style="list-style-type: none"> <li>• Atomic models</li> <li>• Diagrams showing covalent and electrovalent bonds.</li> </ul>	Is the student able to differentiate the characteristics of electrovalent and covalent bonding?	6

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) explain the meaning and significance of hydrogen bonding.	Teacher should lead students to discuss the effects of hydrogen bonding in the shape of ice.	Diagrams showing hydrogen bonding	Is the student able to explain the meaning and significance of hydrogen bonding?	
2.2 Hybridization of Atomic Orbitals	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain the concept of hybridization of atomic orbitals.</li> <li>b) describe the shapes of <math>sp^3</math>, <math>sp^2</math> and <math>sp</math> hybrid orbitals;</li> <li>c) explain the overlapping of hybrid orbitals to form molecular orbitals.</li> </ul>	<p>Teacher to lead students to discuss the hybridization of atomic orbitals, so as to establish <math>sp^3</math>, <math>sp^2</math> and <math>sp</math> hybrid orbitals and examples of molecules in which the hybrid bonds are found.</p>	<p>Diagrams showing hybridization of atomic orbitals</p>	<p>Is the student able to explain the concept of hybridization of atomic orbitals?</p>	
		<p>Students to draw and describe the shapes of <math>sp^3</math>, <math>sp^2</math> and <math>sp</math> hybrid orbitals.</p>	<ul style="list-style-type: none"> <li>• Diagrams showing shapes of hybridized orbital</li> <li>• Models</li> </ul>	<p>Is the student able to describe the shapes of <math>sp^3</math>, <math>sp^2</math> and <math>sp</math> hybrid orbitals?</p>	
		<p>i) Students draw and use models to demonstrate the overlapping of hybrid orbitals to form molecular orbitals.</p> <ul style="list-style-type: none"> <li>• Sigma bond from <math>sp^3 - sp^3</math> overlapping</li> <li>• Sigma and pie bonds from <math>sp^2 - sp^2</math> overlapping</li> <li>• Sigma and Pie bonds from <math>sp - sp</math> side way overlapping</li> </ul>	<ul style="list-style-type: none"> <li>• Wall charts showing overlapping of <math>sp^3 - sp^3</math>, <math>sp^2 - sp^2</math> and <math>sp - sp</math>.</li> <li>• Models</li> </ul>	<p>Is the student able to explain the overlapping of hybrid orbitals to form molecular orbitals?</p>	6

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		ii) Teacher to guide students to discuss the relative strengths of molecular bonds from the type of overlapping involved.			
3.0 GASES 3.1 The Gas Laws	By the end of this sub-topic the student should be able to: a) describe the gas laws;  b) use general gas equation to carry out calculations;	i) Teacher to guide students to discuss Boyle's law and Charles' law  ii) Students to derive mathematical equations of <ul style="list-style-type: none"><li>• Boyle's law</li><li>• Charles' law</li><li>• General Gas Equation</li></ul>	Wall charts showing the apparatus used to prove the laws.	Is the student able to describe the gas laws?	6
	c) describe the Avogadro's law, Graham's law and Dalton's law of partial pressure.	Students to use general gas equation and ideal gas equation to carry out calculations based on the gas laws.	Textbooks	Is the student able to use general gas equation to carry out calculations?	Is the student able to describe the Avogadro's law, Graham's law and Dalton's law of partial pressure?

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
3.2 Kinetic Theory of Gases	By the end of this sub-topic the student should be able to: a) describe the characteristics of a gas as influenced by pressure, volume, and temperature changes;  b) explain the Kinetic Theory of Gases and assumptions leading to the fundamental Kinetic Equation;  c) use the fundamental Kinetic Equation to deduce the gas laws.	Teacher to guide students to discuss the behaviour of gases as influenced by pressure, volume and temperature changes.	<ul style="list-style-type: none"> <li>• Wall charts and pictures</li> <li>• Models</li> </ul>	Is the student able to describe the characteristics of gas as influenced by pressure, volume and temperature changes.  6	
3.3 Relative Molecular Masses and Densities of Gases	By the end of this sub-topic the student should be able to: a) describe molecular masses and relative densities of gases;	Teacher to guide students to discuss how molecular masses of gases are determined by Duma's and Victor Meyer's methods.	Textbooks	Is the student able to use the fundamental Kinetic Equation to deduce the gas laws?  4	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe different methods used to find molecular masses of gases;  c) explain the abnormal relative densities of vapour.	Teacher to guide students to discuss relative molecular masses and densities of gases and vapours.	Duma's bulb, water bath, thermometer, propanone, victor Meyer's apparatus, diethyl ether, desiccators.	Is the student able to describe different methods used to find molecular masses of gases?	
4.0 RELATIVE MOLECULAR MASSES IN SOLUTION 4.1 Colligative Properties of Solutions	By the end of this sub- topic the student should be able to: a) explain the meaning of colligative properties;	Teacher to guide students to discuss how molecular masses of gases are affected by association and dissociation of vapours.	Textbooks	Is the student able to explain the abnormal relative densities of vapours?	6
	b) explain how colligative properties of solutions are used to determine the molar masses of solutes.	Teacher to guide students to discuss the meaning of colligative properties.	<ul style="list-style-type: none"> <li>• Beckman's apparatus</li> <li>• Lands Berger apparatus</li> <li>• Freezing point apparatus</li> <li>• Osmometer</li> <li>• Weighing bottle</li> </ul>	<ul style="list-style-type: none"> <li>Is the student able to explain the meaning of colligative properties?</li> </ul>	
		Students in small groups to demonstrate how boiling point elevation, freezing point depression, lowering vapour pressure and osmotic pressure are used to determine the molar masses of solutes.	<ul style="list-style-type: none"> <li>• Thermometer</li> <li>• Common salt/ Sugar</li> <li>• Water</li> <li>• Beaker</li> <li>• Source of heat</li> </ul>	<ul style="list-style-type: none"> <li>Is the student able to explain how colligative properties of solutions are used to determine the molar masses of solutes?</li> </ul>	9

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
4.2 Laws Governing the Colligative Properties	<p>By the end of this sub-topic the student should be able to:</p> <p>a) describe the Raoult's law which governs colligative properties;</p>	<p>i) Teacher to guide students to discuss Raoult's law, Bladgens Law and Molar solutions.</p> <p>ii) Students to perform experiments to demonstrate the elevation of boiling point and depression of freezing point.</p> <p>iii) Teacher to guide students to discuss on the lowering of vapour pressure and osmotic pressure.</p>	<ul style="list-style-type: none"> <li>• Beckman's apparatus</li> <li>• Freezing point apparatus</li> <li>• Lands berger apparatus</li> <li>• Osmometer</li> <li>• Weighing bottle</li> <li>• Plastic bottles</li> </ul>	<p>Is the student able to describe the Raoult's law which governs colligative properties?</p>	8

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) determine the degree of dissociation of strong electrolytes in solution.	i) Teacher to guide students to determine degree of dissociation using van't Hoff factor-i. ii) Students to determine the relative molecular masses of solutes by using van't Hoff factor-i. iii) Teacher should lead a discussion on how relative molecular masses of solutes are affected by association/ dissociation of solutes.	• Beckmans apparatus • Osmometer • Weighing bottle • Weighing balance	Is the student able to determine the degree of dissociation of strong electrolytes in solution?	
<b>5.0 TWO COMPONENT LIQUID SYSTEMS</b>	By the end of this sub- topic the student should be able to: a) describe the properties of immiscible liquids;	i) Students to perform an experiment showing immiscible liquids and partially miscible liquids. ii) Teacher to guide students to discuss on low boiling point of immiscible liquids due to high vapour pressure.	• Separating funnels • Beakers • Immiscible liquids • Partially miscible liquids	Is the student able to describe the properties of immiscible liquids?	6

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) explain the application of the immiscible liquids;	i) Student to investigate the distillation process of immiscible liquids. ii) Teacher to guide students through discussion to explain how steam distillation of a compound of high boiling point can be achieved at lower temperature than that of either pure component.  c) determine the molar mass of a high boiling point liquid by using steam distillation.	• Distillation apparatus • Immiscible liquids	Is the student able to explain the application of immiscible liquids?	
5.2 Completely Miscible Liquids	By the end of this sub- topic the student should be able to: a) describe the Raoult's Law;  b) differentiate ideal from non-ideal solutions;	Teacher should lead students in the discussion on Raoult's law and principles underlying the law.  i) Students to give examples of ideal solutions and non-ideal solutions ii) Teacher to guide students to distinguish ideal from non-ideal solutions.	• Steam distillation apparatus • Immiscible liquids	Is the student able to determine the molar mass of high boiling liquid by using steam distillation?  Is the student able to describe the Raoult's law?	6

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) demonstrate positive and negative deviation from Raoult's Law;	<ul style="list-style-type: none"> <li>i) Students to brainstorm on solutions that exhibit positive and negative deviation from Raoult's law.</li> <li>ii) Teacher to guide students to discuss reasons for positive and negative deviation from Raoult's law.</li> </ul> d) describe vapour pressure diagrams;	<ul style="list-style-type: none"> <li>Wall chart showing positive and negative deviation from Raoult's law.</li> </ul> <ul style="list-style-type: none"> <li>Wall chart showing vapour pressure diagrams for ideal and non-ideal solutions.</li> <li>Students through group discussion to explain vapour pressure diagrams for positive and negative deviation.</li> <li>Teacher to lead students to discuss the concept of azeotropic mixtures.</li> </ul>	<ul style="list-style-type: none"> <li>Is the student able to demonstrate positive and negative deviation from Raoult's law?</li> </ul> <ul style="list-style-type: none"> <li>Is the student able to describe vapour pressure diagrams?</li> </ul>	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	e) demonstrate the process of fractional distillation;	i) Students under teacher's guidance to perform an experiment on the processes of fractional distillation. ii) Teacher to guide students discuss the products of fractional distillation.	• Side armed flasks • Thermometers • Fractionating columns • Boiling flasks • Beakers • Condensers	Is the student able to demonstrate the process of fractional distillation?	
5.3 The Distribution Law	f) explain the application of fractional distillation.	Teacher to guide students to discuss on the application of fractional distillation in the local environment and in industry.	Fractional distillation apparatus	Is the student able to explain the application of fractional distillation?	
	By the end of this sub-topic the student should be able to: a) explain the meaning of the distribution law	Teacher to guide students to brainstorm on the distribution of a solute between two immiscible solvents.	• Separating funnel • Solute • Two immiscible solvents	Is the student able to explain the distribution law?	
	b) demonstrate the distribution law;	i) Students to perform an experiment to illustrate the distribution law e.g. distribution of iodine between water and petroleum ether.	• Pipettes • Beakers • Conical flasks • Iodine • Petroleum ether • Separating funnel	Is the student able to demonstrate the distribution law?	6

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		<p>ii) Teacher to guide students discuss the results of the experiment leading to the calculation of the distribution constant. <i>Caution:</i> Avoid poisonous substances like tetrachloromethane and benzene.</p> <p>c) apply distribution law in solvent extraction;</p> <p>i) Students to perform an experiment to show application of distribution law in solvent extraction like in chromatography.</p> <p>ii) Teacher to guide students in the discussion of different application of distribution law in solvent extraction.</p> <p>d) explain the deviations from the distribution law.</p>	<ul style="list-style-type: none"> <li>• Separating funnels</li> <li>• Burettes</li> <li>• Filter paper</li> <li>• Petridish</li> <li>• Flowers</li> <li>• Leaves</li> <li>• Solvent (propanone)</li> </ul>	<p>Is the student able to apply distribution law in solvent extraction?</p>	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
6.0 ENERGETICS 6.1 Heats of Reaction	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain the concept of heats of reaction;</li> <li>b) determine the heat of neutralization;</li> <li>c) determine the heat of solution.</li> </ul>	<p>i) Students to discuss different heat changes.</p> <p>ii) Teacher to guide students through discussion on heats of formation, neutralization, combustion, dilution, atomization, solution and dissociation.</p> <p>b) determine the heat of neutralization;</p> <p>c) determine the heat of solution.</p>	<ul style="list-style-type: none"> <li>• Beaker</li> <li>• Salt</li> <li>• Thermometer</li> <li>• Source of heat</li> <li>• Acid</li> <li>• Base</li> <li>• Balance</li> <li>• Distilled water</li> </ul> <p>i) Students to perform an experiment to determine heat of neutralization using NaOH and HCl.</p> <p>ii) Teacher to guide students in discussing the heat change determination.</p>	<p>Is the student able to explain the concept of heats of reaction?</p> <p>Is the student able to determine the heat of neutralization?</p> <p>Is the student able to determine the heat of solution?</p>	<p>6</p>

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
6.2 Hess's Law	By the end of this sub-topic the student should be able to: a) explain the Hess's Law;  b) apply Hess's Law in the calculations of heat changes;	Teacher to guide students in the discussion on the concept of Hess's law.  i) Students to carry out calculations on heat changes using Hess's law. ii) Teacher to lead students in discussing various calculations where Hess's law is applicable.	• Thermometer • Beaker • Salt • Acids • Bases	Is the student able to explain the Hess's law?  6	
c) describe the Born Haber cycle;		Teacher to guide students in the discussion of Born-Haber cycle using compounds like NaCl, KBr, CaO and MgCl <sub>2</sub> .	Textbooks	Is the student able to apply Hess's law in the calculation of heat changes?	
d) relate heats of formation to bond energies.		Teacher should lead students to discuss the relation between heats of formation and bond energies.	Charts and pictures	Is the student able to relate heat of formation to bond energies?	
7.0 PERIODIC CLASSIFICATION	By the end of this sub-topic the student should be able to: a) explain the concept of periodicity;	Teacher to guide students to discuss the concept of periodicity.	Modern periodic table	Is the student able to explain the concept of periodicity?	6
7.1 Periodicity					

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) compare the efforts of different scientist in trying to classify elements;	i) Teacher to guide students to classify elements according to Newland, Meyer, Mendeleev and Mosley. ii) Students to use Mosley classification to establish a periodic table.  c) describe the main features of the modern periodic table;	Wall chart showing modern periodic tables of Newland, Meyer Mendeleev and Mosley	Is the student able to explain the progress of different scientists in classifying elements?	
7.2 Periodic Trends in Physical Properties		d) compare the periodic law in terms of atomic masses versus atomic numbers.	i) Teacher should lead students to use the periodic law to establish groups, periods and blocks. ii) Students to use the periodic law to construct a periodic table according to Mosley.  Students to use the periodic law to compare atomic masses versus atomic numbers of elements.	Modern periodic table  Modern periodic table	Is the student able to describe the main features of the modern periodic table?  Is the student able to compare the periodic law in terms of atomic masses versus atomic numbers?

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe periodic trends in physical properties down the groups;	Teacher to lead students to discuss the periodic trend in physical properties of elements down the groups IA, IIA and VII.	Modern periodic table	Is the student able to describe periodic trends in physical properties down the group?	
	c) describe periodic trends in physical properties across period 3.	Teacher to guide students to discuss periodic trends in physical properties of elements across period 3.	Modern periodic table	Is the student able to describe periodic trends in physical properties across period 3?	
7.3 Periodic Trends in Chemical Properties	By the end of this sub-topic the student should be able to: a) describe trends in chemical properties in groups;	i) Teacher to guide students to discuss the reaction between elements in group IA, IIA and VIIA with air, H <sub>2</sub> O, HCl, NaOH, HNO <sub>3</sub> and H <sub>2</sub> SO <sub>4</sub> ii) Students to establish the trends in chemical properties of elements in groups IA, IIA VIIA.	• Modern periodic table • H <sub>2</sub> O, HCl, NaOH, HNO <sub>3</sub> , H <sub>2</sub> SO <sub>4</sub>	Is the student able to describe trends in chemical properties in groups?	
	b) describe trends in chemical properties along period 3	i) Teacher to guide students to discuss the action of water on hydrides, chlorides, hydroxides and oxides of elements in period 3. ii) Teacher should lead a discussion on the ionic character of chlorides, hydroxides and hydrides of elements in period 3.	• Modern periodic table • Water • Hydrides, chlorides, hydroxides and oxides of elements in period 3	Is the student able to describe trends in chemical properties along period 3?	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		iii) Students to prepare charts that describes the trends of chemical properties of elements in period 3.			
7.4 Diagonal Relationship	By the end of this sub-topic the student should be able to: a) explain the concept of diagonal relationship;  b) explain the diagonal relationship between lithium and magnesium; beryllium and aluminium;	Teacher to guide students to discuss the concept of diagonal relationship.  i) Teacher should lead a discussion on diagonal relationship of Li/Mg and Be/Al. ii) Students to deduce the diagonal relationship between Lithium and Magnesium; beryllium and Aluminium.  c) explain why the first elements in a group differ from the rest.	Modern periodic table	Is the student able to explain the concept of diagonal relationship?  Is the student able to explain the diagonal relationship between lithium and magnesium; beryllium and aluminium?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
8.0 SELECTED COMPOUNDS OF METALS	By the end of this sub-topic the student should be able to: a) classify metal oxides;	Students to classify metal oxides as basic, acidic, amphoteric or mixed oxides. Metals selected are Na, Mg, Ca, Al, Fe, Cu, Zn and Pb.	Oxides of Na, Mg, Ca, Al, Fe, Cu, Zn and Pb.	Is the student able to classify metal oxides?	
8.1 Oxides	b) prepare oxides of metals by direct and indirect methods;  c) demonstrate the reactions of metal oxides with water and with dilute acids;  d) explain the uses of metal oxides;	Students to prepare metal oxides in the laboratory by directly heating the metal in air also by indirect method using concentrated nitric acid.  Students to carry out reactions to demonstrate the properties of oxides as they react with water and dilute acids	• HNO <sub>3</sub> • Metal • Dilute H <sub>2</sub> SO <sub>4</sub> • Dilute HCl • Metal oxides	Is the student able to prepare oxides of metals by direct and indirect methods?  Is the student able to demonstrate the reactions of metal oxides with water and with dilute acids?	6
8.2 Hydroxides	e) describe the reactions of amphoteric oxides.	Students to discuss the uses of metal oxides in furnaces and as liming materials	• MgO • CaO	Is the student able to explain the uses of metal oxides?	
	By the end of this sub-topic the student should be able to: a) prepare metal hydroxides by direct and in direct methods;	Students to write balanced equations for the reactions of normal and amphoteric oxides	• ZnO • Al <sub>2</sub> O <sub>3</sub> • PbO	Is the student able to describe the reactions of amphoteric oxides?	
		Students to prepare metal hydroxides by direct and in direct methods	• Metals selected • Oxides of selected metals • H <sub>2</sub> O	Is the student able to prepare metal hydroxides by different methods?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) prescribe the properties of metal hydroxides;	Students to demonstrate experimentally how metal hydroxides react with other elements/compounds.	Hydroxide of selected metals	Is the student able to describe the properties of metal hydroxides?	
	c) explain the uses of metal hydroxides.	Teacher to guide students to discuss the uses of metal hydroxides in industry, including the manufacture of soap.	Hydroxide of selected metals	Is the student able to explain the uses of metal hydroxides?	
8.3 Carbonates and Hydrogen carbonates	By the end of this sub-topic the student should be able to: a) prepare metal carbonates by indirect methods;  b) explain the non-existence of the carbonates of iron and aluminium;	Students to prepare carbonates and hydrogen carbonates by direct and indirect methods.  Teacher to guide students to explain why the carbonates of iron and aluminium have never been prepared	• lime water • NaOH • Straw  • $\text{Al}_2\text{O}_3$ • $\text{Fe}_2\text{O}_3$ • Textbooks	Is the student able to prepare metal carbonates by indirect methods?  Is the student able to explain the non-existence of the carbonates of iron and aluminium?	
	c) demonstrate the effect of heat on carbonates;	Students to demonstrate experimentally the effects of heat on metal carbonates.	• Carbonates of selected metals	Is the student able to demonstrate the effect of heat on carbonates?	6
	d) describe the properties of metal carbonates and hydrogen carbonates;	Students to demonstrate the reactions of carbonates with water and with acid.	• $\text{H}_2\text{O}$ • Mineral acids • Carbonates of selected metals	Is the student able to describe the properties of metal carbonates and hydrogen carbonates?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	e) describe the uses of carbonates and hydrogen carbonates.	Teacher to guide students to discuss the uses of metal carbonates and hydrogen carbonates in industry and in agriculture.	<ul style="list-style-type: none"> <li>• Quick lime</li> <li>• <math>\text{Ca}(\text{OH})_2</math></li> </ul>	Is the student able to describe the uses of carbonates and hydrogen carbonates?	
8.4 Sulphates	By the end of this sub-topic the student should be able to: a) prepare soluble and insoluble metal sulphates by direct and indirect methods;	Students to prepare metal sulphates by direct and indirect methods.	<ul style="list-style-type: none"> <li>• <math>\text{H}_2\text{SO}_4</math></li> <li>• Glassware</li> <li>• <math>\text{Pb}(\text{NO}_3)_2</math></li> <li>• <math>\text{Na}_2\text{SO}_4</math></li> <li>• Metals selected</li> <li>• Oxides of selected metal</li> </ul>	Is the student able to prepare soluble and insoluble metal sulphates by direct and indirect methods?	
	b) describe the properties of sulphates;	Students to carry out experiments to test the properties of metal sulphates.	<ul style="list-style-type: none"> <li>• <math>\text{Na}_2\text{SO}_4</math></li> <li>• <math>\text{ZnSO}_4</math></li> <li>• Glassware</li> </ul>	Is the student able to describe the properties of sulphates?	6
	c) describe the uses of sulphates;	Teacher to guide students go discuss the uses of metal sulphates in industry and in agriculture.	<ul style="list-style-type: none"> <li>• <math>\text{H}_2\text{SO}_4</math></li> <li>• Sulphate of ammonia</li> </ul>	Is the student able to describe the uses of sulphates?	
	d) demonstrate the effect of heat on sulphates.	Students to test the effects of heat on common sulphates of metals.	<ul style="list-style-type: none"> <li>• <math>\text{BaSO}_4</math></li> <li>• <math>\text{CuSO}_4</math></li> </ul>	Is the student able to demonstrate the effect of heat on sulphates?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
8.5 Chlorides	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) prepare metal chlorides by direct and indirect methods;</li>   <li>b) describe the properties of metal chlorides;</li>   <li>c) describe special characteristics of <math>\text{FeCl}_3</math> and <math>\text{AlCl}_3</math>;</li>   <li>d) explain the uses of chlorides.</li> </ul>	<p>Students to prepare metal chlorides by direct and indirect methods.</p> <ul style="list-style-type: none"> <li>• Dil.HCl</li> <li>• <math>\text{Cl}_2</math></li> <li>• Metals selected</li> <li>• oxides of selected metals</li> </ul> <p>Teacher should lead students to demonstrate experimentally the properties of metal chlorides.</p> <p>Teacher and students to discuss the special characteristics of <math>\text{FeCl}_3</math> and <math>\text{AlCl}_3</math> in the gaseous state.</p> <p>Students to discuss the uses of metal chlorides.</p>	<ul style="list-style-type: none"> <li>• Dil.HCl</li> <li>• <math>\text{Cl}_2</math></li> <li>• Metals selected</li> <li>• oxides of selected metals</li> </ul> <p>Chlorides of metals selected</p> <ul style="list-style-type: none"> <li>• <math>\text{FeCl}_3</math></li> <li>• <math>\text{AlCl}_3</math></li> </ul> <p>Chlorides of metals selected</p>	<p>Is the student able to prepare metal chlorides by a variety of methods?</p> <p>Is the student able to describe the properties of metal chlorides?</p> <p>Is the student able to describe the special properties of <math>\text{AlCl}_3</math> and <math>\text{FeCl}_3</math>?</p> <p>Is the student able to explain the uses of chlorides</p>	<p>6</p> <p>6</p> <p>6</p>
8.6 Nitrates	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) prepare metal nitrates by direct and indirect methods;</li> </ul>	<p>Students to prepare metal nitrates in the laboratory by direct and indirect methods.</p> <ul style="list-style-type: none"> <li>• Dil <math>\text{HNO}_3</math></li> <li>• Oxides of metals selected</li> <li>• Hydroxides of metals selected</li> <li>• Carbonates of metals selected</li> </ul>	<ul style="list-style-type: none"> <li>• Dil <math>\text{HNO}_3</math></li> <li>• Oxides of metals selected</li> <li>• Hydroxides of metals selected</li> <li>• Carbonates of metals selected</li> </ul>	<p>Is the student able to prepare metal nitrates by different methods?</p>	<p>6</p>

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe the properties of metal nitrates;	Students to carryout experiments to test the properties of metal nitrates.	Nitrates of selected metals	Is the student able to describe the properties of metal nitrates?	
	c) describe the effects of heat on metal nitrates;	Students to test the effect of heat on metal nitrates.	Nitrate of selected metals	Is the student able to describe the effects of heat on metal nitrates?	
	d) explain the uses of metal nitrates.	Students to discuss the uses of nitrates in industry and in agriculture.	Wall chart showing the uses of nitrates.	Is the student able to explain the uses of metal nitrates?	
9.0 ALIPHATIC HYDROCARBONS	By the end of this sub-topic the student should be able to:	Teacher should lead students to brain storm on the natural occurring organic compounds e.g. proteins, carbohydrates, plastics, fats, acids, synthetic organic compounds medicines, drugs and different salts.	<ul style="list-style-type: none"> <li>• Wall chart showing</li> <li>• Natural occurring organic compounds</li> <li>• Synthetic organic compounds</li> <li>• Different salts</li> <li>• Organic materials</li> <li>• Salts</li> </ul>	Is the student able to differentiate organic and inorganic compounds?	
9.1 Sources of Organic Compounds	b) identify different sources of organic compounds;	Students under teacher's guidance to discuss different sources of organic compounds including petroleum, coal, and natural gas.	Wall chart showing compounds which can be obtained from <ul style="list-style-type: none"> <li>• petroleum</li> <li>• coal</li> </ul>	Is the student able to identify different sources of organic compounds?	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) classify organic compounds into aliphatic and aromatic groups;	Teacher should lead students in the discussion on classes of aliphatic and aromatic hydro carbons; with examples i.e. aliphatic alkanes, alkenes and alkynes exclude cyclic hydrocarbons	Drawing on manila sheet showing aliphatic and aromatic groups.	Is the student able to classify aliphatic and aromatic groups?	
9.2 Properties of Aliphatic Hydrocarbons	d) describe the special properties of the carbon atom.	Teacher should lead students in the discussion on unique features of carbon in organic compounds including the following: i) It undergoes catenation ii) Exhibits a variety of oxidation states iii) Forms strong bonds with a variety of elements iv) Forms multiple bonds.	<ul style="list-style-type: none"> <li>• Models</li> <li>• Wall charts showing <ul style="list-style-type: none"> <li>- variable oxidation states of carbon</li> <li>- multiple bonds of carbon.</li> </ul> </li> </ul>	<p>Is the student able to describe the special properties of the carbon atom?</p> <ul style="list-style-type: none"> <li>• Wall chart showing physical and chemical properties of aliphatic hydrocarbons e.g. melting point, boiling point and solubility.</li> <li>• Atomic models.</li> </ul>	2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) explain the nature of bonding in aliphatic hydrocarbons.	Teacher to guide students to explain nature of bonding in aliphatic hydrocarbons. This has to explain the covalent nature of these compounds, formation of sigma and $\pi$ bonds	<ul style="list-style-type: none"> <li>• Wall chart showing formation of sigma and <math>\pi</math> bonds.</li> <li>• Atomic models.</li> </ul>	Is the student able to explain the nature of bonding in aliphatic hydrocarbons?	
9.3 Alkanes	By the end of this sub-topic the student should be able to: a) describe the general formula homologous molecular and structural formula and isomerism of alkanes.  b) describe the production of alkanes from coal, petroleum and natural gas;  c) explain the concept of saturation in terms of $sp^3$ hybridization in alkanes;	Students to describe the general formula homologous series molecular and structural formulae and isomerism of alkanes.	Wall charts showing homologous series of alkane upto ten carbon atoms	Is the student able to describe the general formula homologous molecular and structural formula and isomerism of alkanes?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	d) explain the physical and chemical properties of alkanes;	Teacher to lead students in the discussion of properties of alkanes i.e. reaction with strong acids and alkalis, combustion, halo generation and cracking process.	Atomic models	Is the student able to explain the physical and chemical properties of alkanes?	
	e) demonstrate laboratory synthesis of a simple alkanes;	Teacher to guide students in the preparation of alkanes	• $\text{AlC}_3$ • $\text{H}_2\text{O}$	Is the student able to synthesis of a simple alkane in the laboratory?	
	f) describe the nature of alkanes as fuels;	Teacher to lead student in discussing the gaseous nature of some alkanes and their use as fuels.	Wall charts showing gaseous, liquids and solids as fuel of alkanes.	Is the student able to describe the nature of alkanes as fuels	
	g) name alkanes and their isomers.	i) Teacher to guide students in naming alkanes and their isomers using the IUPAC system. ii) Students to name more complicated alkanes up to ten carbon atoms	Wall charts showing compounds of alkanes and their names	Is the student able to name alkanes and their isomers?	
9.4 Alkenes	By the end of this sub-topic the student should be able to: a) describe the industrial production of alkenes from the thermal cracking of heavy alkanes;	i) Students under teacher's guidance to brainstorm on industrial production of alkenes by thermal cracking of heavy alkanes. ii) Teacher to summarise the production process of alkenes.	• Wall charts showing production of alkenes by thermal cracking of petroleum • Fractional distillation of petroleum	Is the student able to describe the industrial production of alkenes?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) explain the concept of unsaturation in terms of $sp^2$ hybridization in alkenes;	Teacher to guide students to discuss the concept of unsaturation in alkenes due to $sp^2$ hybridization.	Atomic models	Is the student able to relate $sp^2$ hybridization with unsaturation?	
	c) describe electrophilic addition reactions of alkene;	i) Teacher to guide students in discussing electrophilic addition reactions e.g. catalytic hydrogenation, halogenation, hydrohalogenation, addition of sulphuric acid etc. ii) Teacher to explain Markownikov's rule. iii) Teacher to guide students to discuss oxidation reactions of alkenes with bromine, $KMnO_4$	Charts showing electrophilic addition reactions	Is the student able to describe the electrophilic addition reactions of the alkenes?	
	d) demonstrate laboratory synthesis of a simple alkene;	Teacher should guide students to prepare a simple alkene in the laboratory.	• Alcohol • Conc. $H_2SO_4$ • Beaker	Is the student able to describe the synthesis of ethene?	
	e) name alkenes and their isomers up to five carbon atoms.	i) Teacher to explain rules governing naming of alkenes. ii) Students to name alkenes and their isomers up to five carbon atoms using IUPAC system.	Wall chart showing the names of five isomers of alkenes.	Is the student able to name the first five alkenes and their isomers up to five carbon atoms?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
9.5 Alkynes	By the end of this sub-topic the student should be able to: a) describe the industrial production of alkynes from thermal cracking of heavy alkanes;	Teacher should lead students in discussing the industrial production of alkynes from thermal cracking of heavy alkanes	Wall chart showing production of alkynes from cracking of heavy alkanes.	Is the student able to describe the industrial production of alkynes?	

2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
9.5 Alkynes	By the end of this sub-topic the student should be able to: a) describe the industrial production of alkynes from thermal cracking of heavy alkanes;  b) explain the unsaturation in alkynes in terms of sp hybridization;  c) describe the Markownikov's mechanism in electrophilic addition reactions of alkynes;  d) demonstrate laboratory synthesis of a simple alkyne;  e) name alkynes and their isomers up to five carbon atoms.	Students under teacher's guidance to explain unsaturation in alkynes in terms of sp hybridization.  i) Teacher to explain Markownikov's electrophilic addition reactions of alkynes ii) Students to discuss electrophilic addition reactions of alkynes.  Teacher to lead students to demonstrate the laboratory synthesis of ethyne (acetylene) by reacting cold water with calcium carbide.  i) Teacher to explain rules governing IUPAC system of naming alkynes. ii) Students to name alkynes upto five carbon atoms.	• Wall chart showing the diagrams of sp hybridization. • Atomic models  Charts showing electrophilic addition reactions of alkynes Textbooks  • CaC <sub>2</sub> • Water • Hard tube	Is the student able to relate alkyne unsaturation in terms of sp hybridization?  Is the student able to describe the Markownikov's electrophilic addition reactions of alkynes.  Is the student able to describe the synthesis of acetylene?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
10.0 AROMATIC HYDROCARBONS 10.1 Sources of Hydrocarbons	By the end of this sub-topic the student should be able to: a) identify different sources of aromatic hydrocarbons;  b) explain the special features of benzene	Teacher should lead students to identify various sources of aromatic hydrocarbons.  i) Teachers to introduce the Kekulé structure of benzene; ii) Teacher to explain the modern electronic structure of benzene in terms of $\pi$ electron delocalization and resonance description. iii) Students to prepare pictures and models that describe the structure of benzene.	<ul style="list-style-type: none"> <li>Charts showing different sources of aromatic hydrocarbons</li> <li>Materials containing aromatic compounds.</li> </ul>	Is the student able to identify different sources of aromatic hydrocarbons?  2	
10.2 Properties of Aromatic Hydrocarbons	By the end of this sub-topic the student should be able to: a) describe the resonance delocalization of the benzene $\pi$ system.	Teacher should lead students in the discussion of the resonance/delocalization of the benzene $\pi$ system.	Wall charts showing the resonance structure benzene.	Is the student able to describe the resonance/delocalization of benzene $\pi$ system?	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) explain electrophilic substitution reactions of benzene	i) Teacher to explain the chemical reactivity of benzene in comparison with alkenes e.g. catalytic hydrogenation, free radical addition, ozonolysis and oxidation. ii) Students to explain why benzene does not form addition products e.g. with hydrogen halides, sulphuric acid and $\text{KMnO}_4$ . iii) Teacher to lead students in discussing substitution reactions of benzene e.g. nitration, sulphonation, halogenation, Friedel-Crafts alkylation and acylation	Charts showing electrophilic substitution reactions of benzene.	Is the student able to explain electrophilic substitution reactions of benzene?	
10.3 Substituted Benzene	By the end of this sub-topic the student should be able to:	a) describe the chemical properties of methyl benzene;	i) Teacher to guide students in the discussion of chemical properties of methyl benzene in comparison with benzene (to include hydrogenation, sulphonation, nitration and Friedel-Crafts alkylation and acylation). ii) Students to explain the effect of the methyl group to the ring.	Wall chart showing various chemical reactions of methyl benzene	Is the student able to describe the chemical properties of methyl benzene?  4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) explain the effects of substituents on rates and orientation;	i) Teacher to explain factors which activate or deactivate the benzene ring, and factors which determine the orientation of substitution in the benzene ring. ii) Students to explain the effect of substitution in rates and orientations (positions) for further substitutions for the following groups: X (halogens), OH, -R, NO <sub>2</sub> , -COOH, -SO <sub>3</sub> H, -CHO, -CONH <sub>2</sub> . iii) Teacher should lead a discussion on inductive and mesomeric effects in reactions.  c) explain directive influences in disubstituted benzene.	<ul style="list-style-type: none"> <li>• Wall charts showing chemical reactions of substituent groups on the position of benzene ring.</li> <li>• Wall chart showing groups which activate and deactivate benzene ring.</li> </ul>	Is the student able to explain the effects of substituent groups on the rate of reaction?  Is the student able to explain directive influences in disubstituted benzene?	
<b>11.0 HALOGEN DERIVATIVES OF HYDROCARBONS</b>	By the end of this sub-topic the student should be able to: a) describe the structures of haloalkanes and their isomers;	Teacher to guide students to write the structures of haloalkanes and their isomers.	Wall charts showing structures of haloalkanes and their isomers	Is the student able to describe the structures of haloalkane and their isomers?	2
11.1 Structure and Nomenclature					

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) name haloalkanes and their isomers;	i) Students in small groups to discuss how to name haloalkanes using IUPAC system ii) Students to name haloalkanes using IUPAC system	Wall chart showing the names of haloalkanes	Is the student able to name haloalkanes and their isomers?	
11.2 Preparation of Haloalkanes	By the end of this sub-topic the student should be able to: a) describe different methods of preparing haloalkanes  b) describe the polarity of carbon halogen bond	i) Teacher to lead a discussion on the methods of preparing the haloalkanes ii) Students in small groups to write the chemical reactions involving the preparations of haloalkanes	Wall charts showing chemical reactions involving preparations of haloalkanes	Is the student able to describe different methods of preparing haloalkanes?  4	
11.3 Chemical Properties	By the end of this sub-topic the student should be able to: a) describe the nucleophilic substitution reactions of haloalkanes	i) Students to name the nucleophilic reagents ii) Teacher to guide students to discuss the nucleophilic substitution reactions of haloalkanes. iii) Students to write the chemical reactions involving nucleophilic substitution of haloalkanes	Wall charts showing the polarity of carbon halogen bond	Is the student able to describe the polarity of carbon halogen bond?  Is the student able to describe the nucleophilic substitution reactions of haloalkanes?  4	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe the elimination reactions in haloalkanes	i) Teacher to lead a discussion on the elimination reactions in haloalkanes. ii) Students to write the chemical reactions involving elimination reactions in haloalkanes  c) show the interconvertibility reactions	Wall charts showing elimination reactions of haloalkanes	Is the student able to describe the elimination reactions in haloalkanes?	
		i) Teacher to guide students to discuss how alkanes, alkenes and alkyne scan be converted to alkyl halides and vice versa. ii) Teacher to lead a discussion on how various conversions can occur through Grignard reagent. iii) Students to do various conversions	Wall charts showing the interconvertibility reactions	Is the student able to show the interconvertibility reactions?	
11.4 Uses and Hazards of Haloalkanes	By the end of this sub-topic the student should be able to: a) describe the uses of haloalkanes;	Teacher to guide students to discuss the uses of haloalkanes i) as solvents ii) as insecticides iii) in synthesis of polymers	Wall chart showing the uses of haloalkanes	Is the student able to describe the uses of haloalkanes?	2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe the hazards of haloalkanes.	i) Teacher to lead a discussion on hazards of haloalkanes which include: <ul style="list-style-type: none"><li>• Damage of liver and causes of cancer due to chlorinated hydrocarbons and chlorofluorocarbons</li><li>• Ozone layer destruction</li><li>• Environmental pollution</li></ul> ii) Teacher and students to visit the nearest health centre for more information iii) Teacher and students to visit the land polluted by haloalkanes iv) Students under teachers guide to suggest ways of rectifying the land polluted by hydrocarbons	<ul style="list-style-type: none"><li>• Pictures</li><li>• Wall charts showing<ul style="list-style-type: none"><li>• Chemical reaction of Ozone layer destruction by haloalkanes</li><li>• Ways of rectifying the land polluted by haloalkanes</li></ul></li></ul>	Is the student able to describe the hazards of haloalkanes?	
<b>12.0 HYDOXYL COMPOUNDS</b>	By the end of this sub-topic the student should be able to: a) describe the structure of alcohols and phenols.	i) Teacher to guide students to write the structures of alcohols, phenols and their isomers. ii) Students to write the structures of alcohols and phenols.	Atomic models	Is the student able to describe the structure of alcohols and phenols?	2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) name alcohols and phenols;	i) Teacher to lead a discussion on how to name alcohols and phenols using IUPAC system. ii) Students to name alcohols and phenols according to IUPAC system.	Wall chart showing names of alcohols and phenols	Is the student able to name alcohols and phenols?	
	c) classify alcohols	i) Teacher to guide students to classify alcohols into primary, secondary and tertiary alcohols. ii) Students to distinguish primary, secondary and tertiary alcohols.	Wall chart showing classes of alcohols	Is the student able to classify alcohols?	
12.2 Preparation of Hydroxyl Compounds	By the end of this sub-topic the student should be able to: a) explain the synthesis of hydroxy compounds;	i) Teacher to guide students to discuss various methods of introducing -OH group into organic molecules. ii) Students under teacher's guidance to write various conventional methods of introducing -OH group into the organic molecules. iii) Teacher to guide students to discuss Grignard synthesis of alcohols	• Wall charts showing various methods of introducing -OH group into organic molecules. • Textbooks	Is the student able to explain the synthesis of hydroxy compounds?	2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	<p>iv) Student under teacher's guidance to practice the method of Grignard synthesis of alcohol.</p> <p>b) explain industrial preparation of hydroxyl compounds</p>	<p>i) Students to discuss how alcohols can be prepared locally</p> <p>ii) Teacher to guide students to discuss how methanol and ethanol are prepared industrially.</p> <p>iii) Students under teacher's supervision to visit the nearby breweries and observe the process of beer production and collect information related to Chemistry.</p>	<p>Wall charts showing industrial preparation of methanol and ethanol.</p> <ul style="list-style-type: none"> <li>• Starch</li> <li>• Water</li> <li>• Yeast</li> </ul>	<p>Is the student able to explain the industrial preparation of hydroxyl compounds?</p>	
12.3 Properties of Hydroxyl Compounds	<p>By the end of this sub-topic the student should be able to:</p> <p>a) explain the physical properties of hydroxyl compounds;</p>	<p>Teacher to guide students to discuss the physical properties of hydroxyl compounds, including</p> <p>i) Polarity of O-H bond</p> <p>ii) The size of alkyl or aryl group on solubility</p>	<p>Atomic model</p>	<p>Is the student able to explain the physical properties of hydroxyl compounds?</p>	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe the chemical properties of hydroxyl compounds;	Teacher to guide students to discuss the chemical properties of hydroxyl compounds under the following: i) Comparison of acidity of alcohols and phenol and that of water, ii) Reaction of alcohols with phosphorus trichloride, phosphorus pentachloride and thionyl chloride. iii) Elimination reaction of alcohols, iv) Inter convertibility of alkanols, alkanes, alkenes and alkynes, v) Oxidation reactions. vi) The difference between primary, secondary and tertiary alcohols, vii) Iodoform reaction. viii) Iodoform reaction in detecting structures of alcohols ix) Esterification, etherification and reduction reactions. x) Detection of phenols using ferric chloride solution.	<ul style="list-style-type: none"> <li>• Wall chart showing various reactions of alcohols</li> <li>• pH</li> <li>• Ethanol</li> </ul>	Is the student able to describe the chemical properties of hydroxyl compounds?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		xi) Electrophilic substitution in phenols (halogenation, alkylation, acylation, nitration and sulphonation). xii) Difference between alkanols and phenols.  c) distinguish alkenes from phenols.	<ul style="list-style-type: none"> <li>• Phenol</li> <li>• Propan-2-ol</li> <li>• NaOH</li> <li>• I<sub>2</sub></li> <li>• FeCl<sub>3</sub></li> <li>• Heat source</li> </ul>		
12.4 Uses and Hazards of Hydroxyl Compounds	By the end of this sub-topic the student should be able to: a) give the uses of hydroxyl compounds;  b) describe hazards of hydroxyl compounds.	Teacher to guide students to describe the differences between alkanols and phenols  Teacher to guide students to discuss the uses of alcohols and phenols.	Phenol, Ethanol, NaOH, I <sub>2</sub> , FeCl <sub>3</sub> , Heat source	Is the student able to distinguish alkenes from phenols?  Is the student able to give uses of hydroxyl compounds?	2  2
13.0 CARBONYL COMPOUNDS	By the end of this sub-topic the student should be able to: a) describe the carbonyl compounds;  b) name carbonyl compounds.	a) describe the carbonyl compounds;  b) name carbonyl compounds;	Wall chart showing the uses of hydroxyl compounds  Teacher should lead students to discuss the hazards of alcohols and phenols.	Wall charts showing the hazards of hydroxyl compounds  Wall charts showing carbonyl compounds	Is the student able to describe hazards of hydroxyl compounds?  Is the student able to describe carbonyl compounds?
13.1 Structure and Nomenclature		i) Teacher to explain the rules governing the IUPAC system of naming carbonyl compounds.	Wall charts showing names of carbonyl compounds	Is the student able to name carbonyl compounds?	2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
13.2 Preparation of Carbonyl Compounds	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain the preparation methods of aldehydes;</li> <li>b) explain the preparation methods of ketones.</li> </ul>	<p>ii) Students to name carbonyl compounds and their isomers upto five carbon atoms (name simple aromatic carbonyl compounds).</p> <p>Teacher to guide students in explaining methods of preparing aldehydes e.g. oxidation of alcohols (primary) and reduction of carboxylic acids</p>	<ul style="list-style-type: none"> <li>• Methanol</li> <li>• <math>K_2Cr_2O_7</math></li> <li>• <math>H_2SO_4</math></li> </ul>	<p>Is the student able to explain preparation methods of aldehydes?</p>	2
13.3 Properties of Carbonyl Compounds.	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) describe the physical properties of carbonyl compounds;</li> <li>b) explain the chemical reactions of carbonyl compounds.</li> </ul>	<p>i) Teacher to explain the polarity of the C= O bond of the carbonyl group</p> <p>ii) Students to predict the effect of polarity to the physical properties (m.p, b.p and solubility).</p>	<p>Wall charts showing the table of m.p, b.p and solubility of aldehydes and ketones</p>	<p>Is the student able to describe the physical properties of carbonyl compounds?</p>	2
		<p>i) Teacher should lead students to identify aldehydes from ketones.</p>	<ul style="list-style-type: none"> <li>• Wall charts showing various chemical reactions of aldehydes and ketones</li> </ul>	<p>Is the student able to explain the chemical reactions of carbonyl compounds?</p>	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		ii) Teacher to guide students in explanation of chemical reactions of aldehydes and ketones to include nucleophilic addition, reactions of the alkyl group adjacent to carbonyl carbon atom and redox reactions	<ul style="list-style-type: none"> <li>Methanal</li> <li>Propanone</li> <li>Benedict's solution</li> <li>Tollen's reagent</li> <li>Test tubes</li> </ul>		
13.4 Uses and Hazards of Carbonyl Compounds.	By the end of this sub-topic the student should be able to: a) explain uses of carbonyl compounds; b) explain hazards of carbonyl compounds.	Teacher to guide students to discuss the uses of carbonyl compounds.  Teacher to guide students to discuss the hazards of carbonyl compounds.	Wall charts showing uses of carbonyl compounds  Wall charts showing hazards of carbonyl compounds	Is the student able to explain uses of carbonyl compounds?  Is the student able to explain hazards of carbonyl compounds?	2
14.0 CARBOXYLIC ACIDS AND DERIVATIVES	By the end of this sub-topic the student should be able to: a) name carboxylic acids using IUPAC system;	Teacher should guide students to name carboxylic acids using IUPAC system.	Wall chart showing names of carboxylic acids	Is the student able to name carboxylic acids using IUPAC system?	
14.1 Carboxylic Acids	b) describe the carboxyl group in carboxylic acids;	Teacher should lead students to discuss about the resonance in the carboxyl functional group.	<ul style="list-style-type: none"> <li>Acetic acid</li> <li>Oxalic acid</li> </ul>	Is the student able to describe the carboxyl group in carboxylic acids?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) explain preparation methods of carboxylic acids;	Students to prepare ethanoic acid in the laboratory.	<ul style="list-style-type: none"> <li>• Ethanol</li> <li>• <math>K_2Cr_2O_7</math></li> <li>• Dil.HCl</li> </ul>	Is the student able to explain preparation methods of carboxylic acids?	
	d) explain properties of carboxylic acids;	i) Teacher to guide students to discuss the properties of carboxylic acids ii) Students to discuss the contribution of hydrogen bonding in the physical properties of carboxylic acids	<ul style="list-style-type: none"> <li>• Acetic acid</li> <li>• Oxalic acid</li> </ul>	Is the student able to explain properties of carboxylic acids?	
14.2 Esters	e) explain uses and hazards of carboxylic acids.	Students in small groups to discuss the uses and hazards of carboxylic acids.	Wall charts showing uses and hazards of carboxylic acids.	Is the student able to explain uses and hazards of carboxylic acids?	
	By the end of this sub-topic the student should be able to:	Teacher to guide students to name esters according to IUPAC system.	Wall charts showing name of esters	Is the student able to name esters?	
	a) name esters;	Teacher should lead students in the discussion about the resonance and delocalization of carboxylate group.	Ethylmethanoate	Is the student able to describe esters?	
	b) describe esters;				4
	c) explain the properties of esters;	Students under teachers guide to discuss the chemical properties of ester including hydrolysis, trans esterification, alcoholysis,	Wallcharts showing various chemical properties of esters	Is the student able to explain the properties of esters?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		reduction with LiAlH <sub>4</sub> and reaction with Grignard reagent.			
	d) explain the uses of esters.	Students to discuss the uses of esters as organic solvents and in the manufacture of soap.	Wall charts showing uses of esters	Is the student able to explain the uses of esters?	

## FORM VI

### **General Competences**

By the end of the Form VI Chemistry course, students should have the ability to:

1. apply mathematical principles to understand qualitative and quantitative chemical processes;
2. use Chemistry knowledge and skills to solve social and environmental problems;
3. apply the principles of science and technology to carry out scientific investigations and analysis;
4. carry out investigations on organic compounds and their uses in everyday life;
5. use soil kits to study the properties of soils and propose proper remedial measures.

### **General Objectives**

By the end of the Form VI Chemistry course, students should be able to:

- a) explain how the factors of concentration, pressure, energy and catalyst affect the rate of Chemical reactions;
- b) maximize the formation of products in equilibrium reactions;
- c) compare and contrast different methods for the extraction of elements from their natural sources;
- d) describe the nature and the principles involved in the aquatic, terrestrial and aerial pollution;
- e) use scientific knowledge and skills to study the chemical nature and properties of soils;
- f) describe the major principles of Organic Chemistry;

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS	
1.0 CHEMICAL EQUILIBRIUM 1.1 Reversible Reactions	By the end of this sub-topic the student should be able to: a) explain the concept of reversible reactions and dynamic equilibrium;	i) Teacher to guide students to discuss the principles of reversible reactions and dynamic equilibrium. ii) Students to demonstrate reversible reaction by adding dilute HCl on $\text{BiCl}_3$ . iii) Students to draw energy diagram to show there action path ways for reversible and irreversible reactions.	• Energy level diagram of reversible reaction • Dil.HCl • $\text{BiCl}_3$	Is the student able to explain the concept of reversible reactions and dynamic equilibrium?	2	
1.2 Equilibrium Constant	By the end of this sub-topic the student should be able to: a) explain the concept of equilibrium constant in terms of concentrations, $K_c$ , and partial pressures, $K_p$ . b) derive equilibrium constants, $K_c$ and $K_p$	b) describe the law of Mass Action.	Teacher should lead students to derive the equilibrium Law, also known as the Law of Mass Action, from an equilibrium reaction and its balanced equation	• Ethanol • Ethanoic acid	Is the student able to describe the law of Mass Action?  Is the student able to explain the concept of equilibrium constant in terms of $K_c$ and $K_p$ ?	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
c) use equilibrium constants to determine the quantities of reacting substances and their products.	Students to carry out experiments on the use of equilibrium constant to find out the equilibrium concentrations of reactants and products in an equilibrium reaction.	• Ethanol • Ethanoic acid	Is the student able to use equilibrium constants to determine the quantities of reacting substances and their products.		
1.3 Factors Affecting Chemical Equilibrium	<p>By the end of this sub-topic the student should be able to:</p> <p>a) Explain the meaning of Le Chatelier's Principle to industrial processes</p> <p>b) explain how different factors affect the position of a chemical equilibrium;</p> <p>c) apply the Le Chatelier's principle to industrial processes.</p>	<p>Teacher should lead students to discuss the meaning of industrial significance of the Le Chatelier's Principle</p> <p>Students to discuss in small groups how the position of chemical equilibrium can be affected by:</p> <ul style="list-style-type: none"> <li>i) Temperature</li> <li>ii) Pressure</li> <li>iii) Concentration</li> <li>iv) Catalyst.</li> </ul>	<p>Diagrams showing Harber process and Contact process</p> <p>• Platinum • Source of heat • Pictures • Diagrams</p>	<p>Is the student able to explain Le Chatelier's Principle to industrial processes?</p> <p>Is the student able to explain how different factors affect the position of chemical equilibrium?</p>	<p>4</p>

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		ii) Contact process for the synthesis of sulphur trioxide, which is used to produce sulphuric acid.			
<b>2.0 CHEMICAL KINETICS</b>	<p>By the end of this sub-topic the student should be able to:</p> <p>a) explain how a chemical reaction may be affected by different factors;</p> <p>2.1 Factors Affecting the Rate of a Chemical Reaction</p>	<p>Teacher to guide students to discuss how the following factors affect the rate of a chemical reaction:</p> <ul style="list-style-type: none"> <li>i) Concentration</li> <li>ii) Temperature</li> <li>iii) Pressure</li> <li>iv) Catalyst</li> <li>v) Physical state of aggregation</li> <li>vi) Light</li> </ul> <p>b) explain the kinetic nature of reacting substances;</p> <p>c) use Arrhenius equation to determine activation energy <math>E_a</math>, and rate constant.</p>	<ul style="list-style-type: none"> <li>• MnO<sub>2</sub></li> <li>• KMnO<sub>4</sub></li> <li>• Heat source</li> </ul> <p>Students to discuss the kinetic behaviour of solid, liquid and gaseous substances at different temperature conditions.</p> <ul style="list-style-type: none"> <li>• Marble Chips</li> <li>• Powdered calcium carbonate</li> <li>• HCl and NH<sub>3</sub></li> </ul> <p>Teacher to lead students to demonstrate experimentally the application of the Arrhenius equation to find activation energy, <math>E_a</math>, and the rate constant of a chemical reaction, <math>K</math>.</p>	<p>Is the student able to explain factors which affect the rate of a chemical reaction?</p> <p>Is the student able to explain the Kinetic nature of reacting substances?</p> <p>Is the student able to use Arrhenius equation to determine activation energy, <math>E_a</math>, and rate constant.</p>	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
2.2 Order of Reaction	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain the concept of order of reaction;</li> <li>b) relate the rate determining step to the order of reaction;</li> <li>c) describe the mechanism of a reaction in relation to its molecularity;</li> <li>d) derive expressions for 1<sup>st</sup> and 2<sup>nd</sup> order reactions;</li> <li>e) determine 1<sup>st</sup> and 2<sup>nd</sup> order reactions experimentally.</li> </ul>	<p>i) Teacher to guide students to discuss the concept of order of reaction</p> <p>ii) Students to differentiate the concepts of molecularity and order of a chemical reaction.</p> <p>Students to discuss the relationship between the order of a reaction and its rate determining step.</p> <p>Teacher to guide students to derive the relationship between the mechanism of a reaction and its molecularity.</p> <p>Students to demonstrate experimentally how to derive expression for the first and second order reactions.</p> <p>Students to engage the integrated rate law to derive expressions for the 1<sup>st</sup> and 2<sup>nd</sup> order reactions.</p>	<ul style="list-style-type: none"> <li>• Glassware</li> <li>• H<sub>2</sub>SO<sub>4</sub></li> <li>• H<sub>2</sub>O<sub>2</sub></li> <li>• N<sub>2</sub>O<sub>5</sub></li> <li>• Wall chart</li> <li>• Pictures</li> <li>• HI</li> <li>• Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub></li> <li>• H<sub>2</sub>O<sub>2</sub></li> <li>• NO<sub>2</sub></li> <li>• Na<sub>2</sub>SO<sub>2</sub></li> <li>• HCl</li> <li>• Stopwatch</li> </ul>	<p>Is the student able to explain the concept of order of reaction?</p> <p>Is the student able to relate the rate determining step to the order of reaction?</p> <p>Is the student able to describe mechanism of a reaction in relation to its molecularity.</p> <p>Is the student able to derive expressions for 1<sup>st</sup> and 2<sup>nd</sup> order reactions?</p> <p>Is the student able to determine 1<sup>st</sup> and 2<sup>nd</sup> order reactions experimentally?</p>	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
<b>3.0 ELECTRO CHEMISTRY</b> By the end of this sub-topic the student should be able to: <ul style="list-style-type: none"> <li>a) differentiate oxidation and reduction reactions;</li> </ul> 3.1 Oxidation and Reduction	i) Teacher to guide students to discuss the concepts of oxidation and reduction in terms of electron transfer and change of oxidation state in reactions. ii) Students to give varied examples of oxidation and reduction reactions.	• Rusted iron • $\text{FeCl}_2$	Is the student able to differentiate oxidation and reduction reaction?	10	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) perform redox titrations;  d) explain the effects of electricity on electrolytes (Faraday's Laws of electrolysis);  e) explain corrosion as a redox reaction;  f) compare the mechanism of iron corrosion protection by zinc and tin.	Students should carry out practical experiments for each of the redox reactions.  i) Students to demonstrate experimentally the Laws of electrolysis by using metal and inert electrodes; ii) Students to compare the quantity of electricity supplied with the amount of substance liberated during electrolysis.  Students to discuss the conditions and the balanced ionic equations for the corrosion of iron.	• KI • KMnO <sub>4</sub> • H <sub>2</sub> C <sub>2</sub> O <sub>4</sub>  • Metal electrodes • Inert electrodes • CuSO <sub>4</sub> • HCl • H <sub>2</sub> SO <sub>4</sub>  • Galvanized iron • Iron • Rusted iron • Pictures	Is the student able to perform various redox titrations?  Is the student able to explain the effects of electricity on electrolytes?  Is the student able to explain corrosion as a redox reaction?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
3.2 The Nernst Equation	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain standard electrode potentials.</li> <li>b) explain the effect of varying electrolyte concentration on the emf of a cell;</li> <li>c) determine the emf of a cell by using the Nernst equation;</li> <li>d) calculate equilibrium constants for redox reactions.</li> </ul>	<p>Teacher should lead students to discuss the concept of standard electrode potentials and their significance.</p> <p>Students to demonstrate experimentally the production of emf by varying the concentrations of electrolytes.</p> <p>Teacher to guide students on how to use the Nernst equation to find the emf of a cell.</p> <p>Students to calculate equilibrium constants for redox reactions.</p>	<ul style="list-style-type: none"> <li>• Wall chart showing cells</li> <li>• Textbooks</li> <li>• Pictures</li> </ul> <ul style="list-style-type: none"> <li>• CuSO<sub>4</sub></li> <li>• ZnCl<sub>2</sub></li> <li>• Galvanic cell</li> </ul> <ul style="list-style-type: none"> <li>• KI</li> <li>• CuSO<sub>4</sub></li> <li>• Diagram showing Daniel and Galvanic cell</li> </ul> <ul style="list-style-type: none"> <li>• CuSO<sub>4</sub></li> <li>• ZnCl<sub>2</sub></li> <li>• KI</li> </ul>	<p>Is the student able to explain standard electrode potentials</p> <p>Is the student able to explain the effect of varying electrolyte concentration on the emf of a cell?</p> <p>Is the student able to determine the emf of a cell by using the Nernst equation?</p> <p>Is the student able to calculate equilibrium constants for redox reactions?</p>	<p>6</p>
3.3 Electrolytes in Solutions	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) use the Van't Hoff factor-i, in the calculation of the degree of ionization;</li> </ul>	Students should demonstrate experimentally how to find the degree of ionization of an electrolyte by using the Van't Hoff factor-i, and carry out related calculations.	<ul style="list-style-type: none"> <li>• K<sub>4</sub>Fe(CN)<sub>6</sub></li> <li>• C<sub>2</sub>H<sub>4</sub>O<sub>2</sub></li> </ul>	Is the student able to use the Van't Hoff factor-i, in the calculation of the degree of ionization?	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) describe the electrical conductivity of solutions of electrolytes.	i) Teacher to guide students to discuss the concept and principles of Ostwald's dilution. ii) Students in small groups to discuss specific conductance and molar conductance. iii) Teacher to guide students to describe the conductance of weak and strong electrolytes at infinite dilution.	• Conductance bridges • Electrolytes	Is the student able to describe the electrical conductivity of solutions of electrolyte?	2
<b>4.0 ACIDS, BASES AND SALTS</b> <b>4.1 Acids and Bases</b>	By the end of this sub-topic the student should be able to: a) explain the Arrhenius concept of acids and bases;	Teacher to guide students in the discussion of Arrhenius concept of acids and bases;	• Water • Wood ash • Lemons • Charts • Pictures • Beakers • Acids • bases	Is the student able to explain the Arrhenius concept of acids and bases?	
	b) explain the Lowry- Bronsted concept of acids and bases;	i) Students to discuss the conjugate acid base pairs. ii) Teacher to guide students to discuss several examples of conjugate acid base pairs based on the donation and acceptance of a proton.	• Weak acid • Strong acid Weak base • Strong base	Is the student able to explain the Lowry-Bronsted concept of acids and bases?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) explain the Lewis concept of acids and bases.	Teacher should lead students to discuss the Lewis concept of acids and bases.	• Diagrams • Magic marker	Is the student able to explain the Lewis concept of acids and bases?	
4.2 Ionic Equilibrium of Acids and Bases	By the end of this sub-topic the student should be able to: a) explain the ionization of weak acids in water, leading to the acid dissociation constant, $K_a$  b) explain the ionization of a weak base in water, leading to the base dissociation constant, $K_b$  c) carry out calculations based on $K_a$ and $K_b$ .	i) Teacher to guide students through group discussion to explain ionization of a weak acid in water.  ii) Teacher to lead students in derivation of acid dissociation constant, $K_a$ , in relation to hydrogen ion concentration.  iii) Students to carry out calculations related to $K_a$   i) Students to carry out calculations based on $K_b$ .  ii) Teacher summarize few calculations on $K_a$ and $K_b$ .	Textbooks	Is the student able to explain the ionization of weak acids in water, leading to the acid dissociation constant, $K_a$ ?  Is the student able to explain the ionization of a weak base in water, leading to the base dissociation constant, $K_b$ ?  Is the student able to carry out calculations based on $K_a$ and $K_b$ ?	6

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
4.3 Ionic Product of Water and pH	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) derive the expression for <math>K_w</math>;</li> <li>b) express the strength of a solution in terms of pH and pOH; Note: <math>pK_w = pH + pOH</math>.</li> <li>c) carry out calculations based on pH and pOH.</li> </ul>	<p>Teacher to guide students in the derivation of ionic product of water, <math>K_w</math> i.e. <math>K_w = [H^+][OH^-]</math></p>	Textbooks	Is the student able to derive the expression for $K_w$ ?  2	
4.4 Buffer Solutions	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain the concept of a buffer solution;</li> <li>b) describe the properties of buffer solutions;</li> <li>c) prepare buffer solutions;</li> </ul>	<p>Teacher to supervise students on carrying out calculations based in pH and pOH. Note: <math>pK_w = pH + pOH</math>.</p> <p>Students to carry out calculations based on pH and pOH.</p>	<p>Diagram of pH scale</p> <p>Diagram of pH scale</p>	<p>Is the student able to express the strength of a solution in terms of pH and pOH?</p> <p>Is the student able to carry out calculations based on pH and pOH?</p>	2

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
4.5 Salt Hydrolysis	d) carry out calculations based on buffer solutions.	Teacher to supervise students carrying out calculations on buffer solutions.	Textbooks	Is the student able to carry out calculations based on buffer solutions?	
	By the end of this sub- topic the student should be able to:	Teacher to guide students to discuss the concept of salt hydrolysis. i) Salt from weak acid and strong base; ii) Salt from weak base and strong acid; iii) Salt from weak base and weak acid.	• Sodium acetate • Ammonium chloride • Ammonium acetate	Is the student able to explain the concept of salt hydrolysis?	2
5.0 SOLUBILITY, SOLUBILITY PRODUCT AND IONIC PRODUCT	By the end of this sub-topic the student should be able to: a) explain the concept of solubility;	Teacher to guide students in showing the behaviour of different salts towards litmus when hydrolysed.	• Litmus paper • Universal indicator	Is the student able to describe the behaviour of salts when hydrolysed?	
5.1 Solubility	a) explain the concept of solubility;  b) explain common ion effect.	Students under teachers guidance to brainstorm on the concept of solubility	• BaSO <sub>4</sub> • CaCO <sub>3</sub>	Is the student able to explain the concept of solubility?	2
		Teacher to guide students to discuss the concept of common ion effect and how it affects solubility of sparingly soluble salts	• AgCl • AgNO <sub>3</sub>	Is the student able to explain common ion effect?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
5.2 Solubility Product	By the end of this sub-topic the student should be able to: a) describe solubility product as an equilibrium constant;	i) Students to discuss solubility product, $K_{sp}$ of a sparingly soluble salt. ii) Teacher to guide students to discuss factors affecting solubility product, $K_{sp}$ <ul style="list-style-type: none"> <li>• High concentration</li> <li>• Temperature</li> <li>• Complex formation</li> </ul> b) calculate solubility product of substances;  c) compare solubility and solubility product.	• BaSO <sub>4</sub> • AgCl	Is the student able to describe solubility product as an equilibrium constant?  Is the student able to calculate solubility product of substances?  Is the student able to compare solubility between solubility and solubility product.	4
5.3 Ionic Product	By the end of this sub-topic the student should be able to: a) explain the concept of ionic product;	Teacher should lead students to discuss the concept of ionic product, Q.	• Na <sub>2</sub> SO <sub>4</sub> • Ba(NO <sub>3</sub> ) <sub>2</sub> • Textbooks	Is the student able to explain the concept of ionic product?	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) compare solubility product and ionic product;	<p>i) Students to discuss the relationship of solubility product, <math>K_{sp}</math>, and ionic product, Q, for sparingly soluble substances.</p> <p>ii) Teacher to summarise the relationship between solubility product and ionic product, that is:</p> <ul style="list-style-type: none"> <li>• If <math>K_{sp} &lt; Q</math> ppt occurs</li> <li>• If <math>K_{sp} &gt; Q</math> no ppt</li> <li>• If <math>K_{sp} = Q</math> saturated</li> </ul> <p>c) explain the prediction of precipitation using ionic product and solubility product.</p>	<p>Charts showing the relationship of solubility product and ionic product?</p>	<p>Is the student able to compare solubility product and ionic product?</p>	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
<b>6.0 EXTRACTION OF METALS</b>	By the end of this sub-topic the student should be able to:	<ul style="list-style-type: none"> <li>i) Teacher to guide students to discuss the natural occurrence of metal ores of Sn, Al and Cu</li> <li>ii) Students to write natural occurrence of metal ores of tin, aluminium and copper.</li> </ul>	Wall chart showing natural occurrence of metal ores of Sn, Al and Cu.	Is the student able to describe the natural occurrence of metal ores of the selected elements?	
6.1 Extraction of Metal by Thermal Reduction	<ul style="list-style-type: none"> <li>b) describe the preliminary stages of ore concentration;           <ul style="list-style-type: none"> <li>i) Crushing</li> <li>ii) Concentration by floatation</li> <li>iii) Roasting in air.</li> </ul> </li> <li>c) explain the mechanism of thermal reduction;</li> <li>d) describe the chemical reactions involved in the thermal reduction of tin;</li> </ul>	<p>Teacher should lead a discussion on the preliminary stages of ore concentration</p> <ul style="list-style-type: none"> <li>i) Crushing</li> <li>ii) Concentration by floatation</li> <li>iii) Roasting in air.</li> </ul> <p>Teacher to guide students to discuss the mechanisms of thermal reduction.</p> <p>Teacher should lead a discussion on how Sn can be extracted by Blast furnace.</p> <p>Students to write important reaction equations taking place in the Blast furnace.</p>	<ul style="list-style-type: none"> <li>• Wall chart showing preliminary stages of ore concentration</li> <li>• Pictures</li> </ul> Textbooks	<p>Is the student able to describe the preliminary stages of ore concentration?</p> <p>Is the student able to explain the mechanism of thermal reduction?</p> <p>Is the student able to describe the chemical reactions involved in the thermal reduction of Sn?</p>	6

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	e) explain why some metals cannot be extracted by thermal reduction method.	i) Teacher to guide students to discuss why some metals can't be extracted by thermal reduction methods.  ii) Students to write some metals which can't be extracted by thermal reduction method.	Wall chart showing Metals which can't be extracted by thermal reduction method	Is the student able to explain why some metals can not be extracted by thermal reduction method?	
6.2 Extraction of Metals by Electrolytic Reduction	By the end of this sub-topic the student should be able to: a) explain the criteria for selecting the electrolytic procedure for extracting some metals;  b) explain the mechanism of electrolytic reduction;	Teacher to guide students to discuss the criteria for selecting electrolytic procedure for extraction of metals.  Teacher should lead discussion on the mechanism of electrolytic reduction.  ii) Students to write reduction equations.	Wall chart showing activity series	Is the student able to explain the criteria for selecting the electrolytic method of metal extraction?	6

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	d) explain why some metal cannot be extracted by electrolytic reduction.	i) Students under teachers guidance to discuss why some metals cannot be extracted by electrolytic reduction.  ii) Students to write some metals which can't be extracted by electrolytic reduction	Wall chart containing some metals which can't be extracted by the electrolytic reduction.	Is the student able to explain why some metal cannot be extracted by electrolytic method?	6
7.0 <b>TRANSITION ELEMENTS</b>	By the end of this sub-topic the student should be able to:  a) describe the concept of transition elements;	i) Teacher to lead students to discuss the concept of transition elements.  ii) Students to write electronic configuration of elements with atomic number 21-30  iii) Students to discuss in small groups whether Cu and Zn are transition elements or not.  b) explain the variable oxidation states in transition elements;	<ul style="list-style-type: none"> <li>• Modern periodic table</li> <li>• Wall chart showing electronic configuration of transition elements with atomic number 21-30</li> </ul>	<p>Is the student able to describe the concept of transition elements?</p> <p>Is the student able to explain the variable oxidation states of each transition elements of atomic number 21-30.</p>	6

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	iii) Teacher to guide students to discuss the cause for variable oxidation states of transition elements.				
c) explain the formation of coloured ions;	Teacher should lead discussion on the Crystal Field Theory.	Wall chart showing diagram of splitting d-orbitals.	Is the student able to explain the formation of coloured ions?		
d) explain the formation of complexes in transition elements;	Teacher to lead a discussion on the concept of empty d-orbitals which can be utilized by other elements/ compounds.	<ul style="list-style-type: none"> <li>• Wall chart showing empty d-orbital of transition elements of atomic number 21 –30.</li> <li>• Transition elements of atomic number 21-30</li> </ul>	Is the student able to explain the formation of complexes in transition elements?		
e) explain the magnetic properties of transition elements;	i) Teacher to guide students to discuss the cause of magnetism in transition elements. ii) Students to classify transition metals as <ul style="list-style-type: none"> <li>• diamagnetic</li> <li>• Paramagnetic</li> <li>• Ferromagnetic</li> </ul>	<ul style="list-style-type: none"> <li>• Transition elements of atomic number 21-30</li> <li>• Magnetic bar</li> <li>• Wall chart showing elements which are diamagnetic paramagnetic and ferromagnetic.</li> </ul>	Is the student able to explain the magnetic properties of transition elements?		

TOPICS/SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	f) describe the catalytic properties of transition elements.	i) Teacher should lead students to discuss the concept of catalytic properties of transition elements.  ii) Students in groups to describe with examples the industrial process where transition elements act as catalysts <ul style="list-style-type: none"> <li>• Haber process</li> <li>• Contact process</li> <li>• Hydrogenation of oil</li> <li>• Liberation of iodine from potassium iodide.</li> </ul>	<ul style="list-style-type: none"> <li>• Finely divided Fe</li> <li>• <math>V_2O_5</math></li> <li>• Ni</li> <li>• <math>I_2</math></li> <li>• <math>Fe^{3+}</math></li> <li>• <math>Cu^+</math></li> <li>• KI</li> </ul>	Is the student able to describe the catalytic properties of transition elements?	6
7.2 Complex Formation and Ligands	By the end of this sub-topic the student should be able to:  a) describe the factors which favour complex ion formation;  b) differentiate an ionic from cationic complexes;	Teacher to lead a discussion on the factors that favours the formation of complex ions, which includes: <ul style="list-style-type: none"> <li>• small ionic radii</li> <li>• utilization of vacant d-orbitals.</li> </ul>	Wall chart showing the central metal ion and ligands.	Is the student able to describe the factors favouring complex ion formation?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) describe the positive, negative and neutral ligands;	i) Teacher should guide students to discuss the concept of ligands. ii) Students in small groups to discuss and classify positive, negative and neutral ligands.	Wall charts showing positive negative and neutral ligands	Is the student able to describe the positive, negative and neutral ligands?	
	d) name complexes using IUPAC system;	i) Teacher should lead students to discuss on how to name complexes according to IUPAC system. ii) Students to name complexes according to IUPAC system.	Wall charts showing the name of complexes.	Is the student able to name complexes using IUPAC system?	
	e) explain why some precipitates dissolve in excess alkali, while others do not;	i) Students in groups to prepare solutions of the following salts: $\text{AgNO}_3$ ; $\text{Zn}(\text{NO}_3)_2$ ; $\text{Ca}(\text{NO}_3)_2$ ; $\text{Pb}(\text{NO}_3)_2$ ; $\text{Cu}(\text{NO}_3)_2$ ; $\text{Fe}(\text{NO}_3)_3$ ; $\text{KOH}$ ; $\text{Mg}(\text{NO}_3)_2$ ii) To each solution add sodium hydroxide solution in small amount, then in excess. iii) Students to explain why some precipitates dissolve in excess alkali, while others do not.	<ul style="list-style-type: none"> <li>• <math>\text{AgNO}_3</math></li> <li>• <math>\text{Zn}(\text{NO}_3)_2</math></li> <li>• <math>\text{Ca}(\text{NO}_3)_2</math></li> <li>• <math>\text{Pb}(\text{NO}_3)_2</math></li> <li>• <math>\text{Cu}(\text{NO}_3)_2</math></li> <li>• <math>\text{Fe}(\text{NO}_3)_3</math></li> <li>• KOH</li> <li>• <math>\text{Mg}(\text{NO}_3)_2</math></li> </ul>	Is the student able to explain why some precipitates dissolve in excess alkali while others do not?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	f) draw the shapes of planar, tetrahedral and octahedral complexes.	Teacher to assist students to draw/ sketch the shapes of planar, tetrahedral and octahedral complexes	<ul style="list-style-type: none"> <li><math>[\text{Ni}(\text{CN})_4]^{2-}</math></li> <li><math>[\text{Cu}(\text{H}_2\text{O})_4]^{2+}</math></li> <li><math>[\text{Fe}(\text{CN})_6]^{4-}</math></li> </ul>	Is the student able to draw the shapes of planar, tetrahedral and octahedral complexes?	
8.0 AMINES	By the end of this sub-topic the student should be able to:	Teacher to guide students to write the structure of 1 <sup>0</sup> , 2 <sup>0</sup> and 3 <sup>0</sup> amines.	<ul style="list-style-type: none"> <li>Atomic models</li> <li>Wall chart showing the structures of amines</li> </ul>	Is the student able to describe the structures of amines?	
8.1 Structure and Nomenclature	a) describe the structures of amines;  b) give the systematic names of amines.	Students in small groups to name amines according to IUPAC system.	Wall charts showing structures and names of amines	Is the students able to give systematic names of amines.	2
8.2 Preparation properties and Uses of Amines	By the end of this sub-topic the student should be able to:  a) describe different methods of preparing amines;	Students in small groups to discuss how amines can be prepared by i) Alkylation of ammonia; ii) Reduction of nitro-alkane; iii) Reduction of amides.	<ul style="list-style-type: none"> <li>R-X where x = Cl, Br, I</li> <li><math>\text{NH}_3</math></li> <li><math>\text{R}-\text{C}=\text{N}</math></li> <li><math>\text{H}_2</math></li> <li>Ni</li> <li><math>\text{Li}[\text{AlH}_4]</math></li> </ul>	Is the student able to describe different methods of preparing amines?	4
	b) describe the physical and chemical properties of amines;	Teacher to guide students to discuss i) Physical properties of amines; ii) Chemical properties of amines	Wall charts showing various physical and chemical properties of amines	Is the student able to describe the physical and chemical properties of amines?	

TOPICS/ SUB TOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) explain the use of amines.	Students in small groups to discuss the uses of amines.	Wall charts showing various uses of amines.	Is the student able to explain the uses of amines?	
<b>9.0 POLYMERS</b>  9.1 Concept of Polymers	By the end of this sub-topic the student should be able to: a) describe the concept of polymers;  b) describe the structures of polymers;  c) identify monomers from polymers.	Teacher to guide student to discuss the concept of polymers.  Teacher should lead students to describe the structures of polymers.  Teacher should lead students to identify monomers from the polymer.	<ul style="list-style-type: none"> <li>• Polythene</li> <li>• Polyvinyl chloride</li> <li>• Cotton cellulose</li> <li>• Nylon 6,6</li> <li>• Terylene</li> </ul>	<p>Is the student able to describe the concept of polymers?</p> <p>4</p>	
<b>9.2 Types of Polymers</b>	By the end of this sub-topic the student should be able to describe different types of polymers	Teacher to guide students to describe types of polymer i.e. i) Synthetic polymers ii) Natural/ synthetic rubber iii) Vulcanisation	<p>Wall charts showing different types of polymers</p> <ul style="list-style-type: none"> <li>• Synthetic polymers</li> <li>• Natural/synthetic rubber</li> <li>• Vulcanisation</li> </ul>	<p>Is the student able to describe different types of polymers?</p> <p>2</p>	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
9.3 Preparation of Synthetic Polymers	By the end of this sub-topic the student should be able to: a) describe additional polymerisation;  b) describe condensation polymerisation.	Teacher to guide students to discuss how additional polymer are prepared.	• Wall charts showing additional polymers • Pictures	Is the student able to describe additional polymerisation?	2
9.4 Properties and Hazards of Polymers	By the end of this sub-topic the student should be able to: a) describe the properties of polymers;  b) describe the hazards of polymers.	Teacher should lead students to discuss the properties of polymers	• Wall chart showing condensation polymers • Pictures	Is the student able to describe condensation polymerisation?	2
10.0 ENVIRONMENTAL CHEMISTRY	By the end of this sub-topic the student should be able to: a) explain the meaning and significance of environmental conservation;	Students in small groups to discuss the hazards of polymers	Wall charts showing the hazards of polymers	Is the student able to describe the properties of polymers?	2
10.1 Conservation		Teacher should lead students to discuss environmental conservation by considering the following: i) Protection of mineral ores against over exploitation. ii) Management of industrial chemical wastes before disposal.	Pictures showing mining process	Is the student able to explain the meaning and significance of environmental conservation?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) compare between resource protection and utilization;	Teacher to guide students to discuss the differences between resource protection, utilization and conservation in this respect, mineral ores, coal, natural gas and petroleum should be considered.	<ul style="list-style-type: none"> <li>• Pictures</li> <li>• Diagrams</li> <li>• Wall charts showing the differences between resource protection and resource utilization.</li> </ul>	Is the student able to differentiate resource protection from resource utilization?	
	c) describe possible reasons for environmental destruction;	Students in small groups to discuss the following reasons of environmental destruction: <ol style="list-style-type: none"> <li>i) Agricultural chemicals;</li> <li>ii) Dumping of solid and liquid industrial wastes on the land and into large water masses, engravers, wells and oceans.</li> <li>iii) Opening up gaseous effluents from industry into the air.</li> </ol>	<ul style="list-style-type: none"> <li>• Diagrams</li> <li>• Pictures</li> <li>• Agricultural chemicals</li> </ul>	Is the student able to describe possible reasons for environmental destruction?	
	d) describe environmental management interventions.	Teacher and students to discuss the following environmental management interventions: <ol style="list-style-type: none"> <li>i) Chemical treatment of urban sewage</li> <li>ii) Chemical treatment of urban supplies of edible/portable water.</li> </ol>	<ul style="list-style-type: none"> <li>• <math>\text{CuSO}_4</math></li> <li>• Water treatment</li> <li>• Chemicals</li> <li>• Alums</li> </ul>	- Is the student able to describe the environmental management interventions?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
10.2 Pollution	By the end of this sub-topic the student should be able to: a) explain the concept of pollution  b) describe aquatic, terrestrial and aerial pollution and their intervention measures;	Students in small groups to discuss the meaning and significance of pollution in real life situation.	Diagrams and pictures showing polluted land, water and air	- Is the student able to predict any possible intervention measures for proper environmental management?  Is the student able to explain the concept of pollution?	
	c) explain the chemical basis of Ozone layer destruction;	i) Students in small groups to discuss the sources of materials which cause aquatic terrestrial and aerial pollution, and how to prevent or manage them  ii) Students to discuss the effects of gaseous, terrestrial and aquatic pollution to human and other animals	• Pictures • Diagrams	Is the student able to differentiate aquatic from terrestrial and aerial pollution?	
		Students to collect information from libraries or the internet on the chemical reactions which lead to the destruction of the natural Ozone layer.	• Journals • Diagrams • Wall charts showing equations of the	Is the student able to explain how the Ozone layer is destroyed chemically?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
		They should write equations for such reactions	natural ozone layer destruction.		
	d) describe the chemical basis of the green house effect;	Students to seek information from libraries or the internet on the chemical reactions of the compounds which cause global warming in the context of green house effect	<ul style="list-style-type: none"> <li>• Journals</li> <li>• Pictures</li> <li>• Wall charts showing chemical reactions which causes global warming</li> </ul>	Is the student able to explain the chemical basis of green house effect?	
11.0 SOIL CHEMISTRY	By the end of this sub-topic the student should be able to: a) explain the meaning and significance of soil colloids;  b) describe the properties of soil colloidal particles	Teacher to guide students to discuss the meaning and significance of soil colloids.	<ul style="list-style-type: none"> <li>• Pictures</li> <li>• Soils</li> </ul>	Is the student able to describe possible intervention measures for proper environmental management.	2
11.1 Soil Colloids		Students in small groups to discuss the following properties of colloidal particles i) Surface area	<ul style="list-style-type: none"> <li>• Pictures</li> <li>• Diagrams</li> </ul>	Is the student able to describe the properties of colloidal particles?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
11.2 Ion Exchange	By the end of this sub-topic the student should be able to: a) explain the mechanism of ion exchange in a soil;  b) describe cation exchange capacity of a soil sample;  c) calculate the percentage base saturation of a soil sample.	Teacher to guide students to discuss the mechanism of ion exchange in a soil sample.	• Diagrams • Pictures	Is the student able to explain the mechanism of ion exchange in soil?	4
11.3 Soil Reaction	By the end of this sub-topic the student should be able to: a) explain the concept of soil reaction;	Students in small groups to discuss the meaning and significance of the cation exchange capacity of soil.	• Pictures • Textbooks	Is the student able to Describe the cation exchange capacity of soil?	4
		Teacher to help students in the calculations of the percentage base saturation of different samples of soils, preferably taken from different geographical areas	• Diagrams • Wall charts showing calculations of percentage base saturation of different type of soil.	Is the student able to calculate the percentage base saturation of soil sample?	
		Teacher to guide students to discuss the meaning of soil reaction i.e. the soil pH (the acidity and alkalinity of the soil)	• pH meter • Soil kit • Pictures	Is the student able to explain the concept of soil reaction?	6

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	b) explain the significance of soil pH;	i) Students to use soil kit or any other improvised method to measure the pH of a sample of soil. ii) Teacher to guide students to discuss how very high or very low pH of the soil can influence: <ul style="list-style-type: none"><li>• Availability of nutrient elements to plants;</li><li>• The formation of insoluble complex compounds in the soil;</li><li>• The collapse or growth of the population of micro organisms in the soil;</li><li>• The rotting of plant roots.</li></ul>	<ul style="list-style-type: none"><li>• Soil kit<ul style="list-style-type: none"><li>• pH meter</li><li>• Diagrams</li></ul></li><li>• Wall charts showing the pH range Vs availability of plant nutrients.</li></ul>	Is the student able to explain the significance of soil pH?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
11.4 Liming and Liming Materials	<p>By the end of this sub-topic the student should be able to:</p> <ul style="list-style-type: none"> <li>a) explain the meaning and significance of liming;</li> <li>b) describe the efficiency of liming materials;</li> <li>c) describe the beneficial effects of liming;</li> <li>d) outline the detrimental effects of overliming;</li> </ul>	<p>iii) Excessive leaching due to irrigation or rainfall; iv) Industrial fertilizers.</p> <p>Students under teacher's guidance to discuss the meaning and significance of liming as a treatment to soil pH</p> <p>Students to discuss the neutralizing values of carbonates, oxides, hydroxides and silicates</p> <p>Students in small groups to discuss the beneficial effects of liming.</p> <p>i) Students in small groups to discuss the detrimental effects of overliming; ii) Students to carry out projects to study the relative growth of plants under different pH conditions i.e. strongly acidic, weakly acidic, neutral; weakly basic and strongly basic.</p>	<p>Fertile and infertile soils.</p> <p>• <math>\text{CaCO}_3</math> • <math>\text{CaO}</math> • <math>\text{Ca(OH)}_2</math> • <math>\text{CaSiO}_3</math></p> <p>• <math>\text{CaO}</math> • <math>\text{CaCO}_3</math></p>	<p>Is the student able to explain the meaning and significance of liming?</p> <p>Is the student able to describe the efficiency of liming materials?</p> <p>Is the student able to explain the beneficial effects of liming?</p> <p>Is the student able to describe the detrimental effects of overliming?</p>	4

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
11.5 Fertilizers and Manures	By the end of this sub-topic the student should be able to: a) explain the similarities and differences between fertilizers and manures;  b) mention the commonly used N, P and K fertilizers;  c) classify straight and mixed fertilizers	Students in small groups to discuss the differences and similarities between industrial fertilizers and manures.  Students to mention the advantages of straight and mixed fertilizers of N, P and K.	• Fertilizers • Organic manures	Is the student able to differentiate manures from fertilizers?  4	
12.0 CHEMICAL ANALYSIS	By the end of this sub-topic the student should be able to: a) standardize an acid using a standard base;  b) standardise a base using a standard acid;	Students to mention example of straight and mixed fertilizers and classify them.	Mixed and straight fertilizers	Is the student able to mention the commonly used N, P and K fertilizers?	
12.1 Volumetric Analysis		Students to carry out volumetric analysis to standardize an acid using a standard base ( $\text{Na}_2\text{CO}_3$ ).  Students to carry out volumetric analysis to standardize an alkali using a standard acid, (oxalic acid)	• $\text{Na}_2\text{CO}_3$ • dil.HCl • glassware • M.O  • Oxalic acid • NaOH • P.O.P • Glassware	Is the student able to classify straight and mixed fertilizers.  Is the student able to standardize an acid using a standard base?  20	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
	c) determine volume of HCl used when $\text{Na}_2\text{CO}_3$ is titrated against HCl using P.O.P. and M.O indicators;	Students to determine volume of HCl used when $\text{Na}_2\text{CO}_3$ , is titrated against HCl using P.O.P. and M.O indicators.	<ul style="list-style-type: none"> <li>Dil. HCl</li> <li><math>\text{Na}_2\text{CO}_3</math></li> <li>P.O.P</li> <li>M.O</li> </ul>	Is the student able to determine volume of HCl used when $\text{Na}_2\text{CO}_3$ is titrated against HCl using P.O.P and M. O?	
	d) determine the proportions in a mixture by the double indicator method;	Students to determine through volumetric analysis the proportions of sodium carbonate and sodium hydroxide in a mixture by double indicator method.	<ul style="list-style-type: none"> <li><math>\text{Na}_2\text{CO}_3</math></li> <li>M.O</li> <li>NaOH</li> <li>POP</li> <li>HCl</li> </ul>	Is the student able to Determine the proportions in a mixture by the double indicator method	
	e) standardize sodium thiosulphate using potassium permanganate;	Students to standardize sodium thiosulphate by potassium permanganate.	<ul style="list-style-type: none"> <li>KMnO<sub>4</sub></li> <li>Sodium thiosulphate</li> <li>dil-H<sub>2</sub>SO<sub>4</sub></li> </ul>	Is the student able to use potassium permanganate?	
	f) standardize sodium thiosulphate using potassium iodate;	Students to standardize sodium thiosulphate by using potassium iodate by volumetric method.	<ul style="list-style-type: none"> <li>KIO<sub>3</sub></li> <li>Sodium thiosulphate</li> <li>KI</li> <li>Starch</li> </ul>	Is the student able to standardize sodium thiosulphate using KIO <sub>3</sub> ?	
	g) carry out a volumetric estimation of copper in copper (II) sulphate.	Students to carry out experimentally the volumetric estimation of copper in copper (II) sulphate by the indirect method of iodine production.	<ul style="list-style-type: none"> <li>CuSO<sub>4</sub></li> <li>I<sub>2</sub></li> </ul>	Is the student able to carry out volumetric estimation of copper?	

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
26.2 Qualitative Analysis	By the end of this sub-topic the student should be able to: a) explain the meaning and significance of qualitative analysis;  b) carry out qualitative analysis to identify cations and anions in a salt or mixture of salts.	Teacher to guide students to discuss the meaning and significance of qualitative analysis.	• Glassware • NaOH • HCl	Is the student able to explain the meaning and significance of qualitative analysis	20
26.3 Physical Chemistry Analysis	By the end of this sub-topic the student should be able to: a) determine the order of a reaction experimentally;  b) determine activation energy, $E_a$ , experimentally;	Students to carry out systematic qualitative analysis through group analysis to identify cations and anions in a single salt or a mixture of salts.	• HCl • $H_2S$ • NaOH • $NH_4OH$	Is the student able to carry out qualitative analysis to identify cations and anions in a salt or mixture of salts?	20
		Students to carryout experiments to verify first and second order chemical reactions.	• HI • Ester • $Na_2S_2O_3$ • HCl/HNO <sub>3</sub>	Is the student able to determine the order of reactions experimentally?	20
		Students to carryout several experiments to determine the activation energy, $E_a$ , of a chemical reaction.	• Glassware • Heat source • Water bath • $Na_2S_2O_3$ • HCl • $H_2C_2O_4$ • $KMnO_4$	Is the student able to determine activation energy of a reaction experimentally?	20

TOPICS/SUBTOPICS	SPECIFIC OBJECTIVES	TEACHING AND LEARNING STRATEGIES	TEACHING AND LEARNING RESOURCES	ASSESSMENT	ESTIMATED NUMBER OF PERIODS
c) use the partition law to establish the distribution of a substance between two phases;	Students to carryout experiments to verify the partition law, where a substance is distributed between two layers or phases	<ul style="list-style-type: none"> <li>• NH<sub>3</sub> between water and CHCl<sub>3</sub></li> <li>• NH<sub>3</sub> between water and isobutyl alcohol</li> </ul>	Is the student able to explain the distribution of a substances between two layers?		
d) determine heats of reaction.	Students to carryout experiments to determine the following heats of reactions <ul style="list-style-type: none"> <li>• Heat of reaction</li> <li>• Heat of neutralization</li> <li>• Heat of dissolution</li> </ul>	<ul style="list-style-type: none"> <li>• NH<sub>4</sub>Cl</li> <li>• Mg</li> <li>• MgCO<sub>3</sub></li> <li>• HCl</li> <li>• NaOH</li> <li>• H<sub>2</sub>SO<sub>4</sub></li> </ul>	Is the student able to determine heats of reaction experimentally?		

Qualitative analysis shall test the identification of the following anions:

- Sulphate:  $\text{SO}_4^{2-}$
- Carbonate:  $\text{CO}_3^{2-}$
- Hydrogen carbonate  $\text{HCO}_3^-$
- Nitrate:  $\text{NO}_3^-$
- Nitrite:  $\text{NO}_2^-$
- Chloride:  $\text{Cl}^-$
- Chromate:  $\text{CrO}_4^{2-}$
- Dichromate  $\text{Cr}_2\text{O}_7^{2-}$
- Oxalate  $\text{C}_2\text{O}_4^{2-}$
- Acetate  $\text{CH}_3\text{COO}^-$

Qualitative analysis shall also test the identification of the following cations through group separation analysis

**Table for Group Separation**

Analytical groups	Ions of solution precipitated	Nature of precipitates
I	$\text{Ag}^+$ , $\text{Pb}^{2+}$	Chlorides
II	$\text{Cu}^{2+}$ , $\text{Cd}^{2+}$ , $\text{Bi}^{3+}$	Sulphides
III	$\text{Sb}^{3+}$ , $\text{Sn}^{2+}$	Sulphides
IV	$\text{Fe}^{3+}$ , $\text{Al}^{3+}$ , $\text{Cr}^{3+}$	Hydroxides
V	$\text{Zn}^{2+}$ , $\text{Mn}^{2+}$ , $\text{Ni}^{2+}$ , $\text{Co}^{2+}$	Sulphides
VI	$\text{Ba}^{2+}$ , $\text{Ca}^{2+}$ , $\text{Sr}^{2+}$	Carbonates
	$\text{Na}^+$ , $\text{K}^+$ , $\text{Mg}^{2+}$ , $\text{NH}_4^+$	No ppt formed
